Hiring Team, Robinhood

Your posting names three things a paid marketing growth team actually lives in: funnel optimization, attribution tracking, and cross-sell into premium services. I have run all three with real numbers behind them, across a paid-media portfolio and a product roadmap, just not under one job title yet.

At Pixis I ran iOS app user acquisition through Appsflyer and Adjust and cut client churn 50% across an 8-client, $15K-$90K/month portfolio, the attribution-and-retention half of what you are describing. At Plug Power I ran 15+ A/B tests across Google Ads, Microsoft Ads, Meta and LinkedIn that cut CPA 25%, then automated the WordPress and Pardot lead flow for closed-loop reporting, cutting cost per lead 50%. Both jobs taught me the same discipline your posting asks for: find the drop-off point, form a hypothesis, test it, and decide to scale or kill it without waiting on a perfect dataset.

The landing-page and subscription piece is where my product background comes in. At Sensata I owned the roadmap for a 100+ feature backlog and built KPI frameworks in SQL and GA4 across 50K+ connected devices to find the cohorts worth chasing. On SwipeHire, my own job-matching platform, I modeled 3 subscription pricing tiers and ran 8+ A/B tests against GA4 funnel data to lift activation 25%, the same custom-landing-page-to-paid-conversion loop your team runs at a much larger scale.

Right now at Applied Materials I build forecasting models and automate repetitive analysis with AI agents built on Claude, which is the instinct behind moving fast on a growth hypothesis instead of waiting for someone else to run the numbers.

I would like to bring that combination, paid-media attribution and funnel testing on one side, product-roadmap and landing-page ownership on the other, to the team growing Robinhood's premium and high-value segments.
