Hiring Team, Salesforce

Your posting asks for someone to "define key performance metrics and build scalable reports, dashboards, and automated resources to monitor the health of pricing initiatives." That is the exact system I built at Sensata: the Bleeders and Leakers Power BI dashboard, which tracked 1,200 pricing opportunities against a $627M target across 3 regions and 4 product families, with pipeline funnel, regional scorecards and win-rate views that let leadership see the initiative's health without asking me for an update. It surfaced $433M in margin gaps, and I turned a chunk of that into $700K+ recovered in two quarters by building each pricing hypothesis on competitive and willingness-to-pay data, then validating it with Sales and Finance before it shipped.

That is also how I would answer "explore and champion the use of AI tools to accelerate analytics workflows." At Applied Materials I already automate repetitive pricing analysis with Claude-based AI agents so the time goes to the actual hypothesis-test-recommend work, not the reporting around it. I am building the same instinct into PriceKeel, the company I founded: it reads a live discount exception and recommends a guardrail explained by a company's own closed-won and closed-lost deals, with an audit trail Finance can defend. That is the enablement layer your posting describes for Deal Desk, renewals and field sellers, built from the buyer's side instead of just described from it.

The distributor and channel-partner repricing I ran at Sensata raised margins from 53% to 61% and held, because the model went to Sales and Finance before it shipped, not after, and because I partnered directly with senior executives on AP26 revenue models and multimillion-dollar customer quotes. Translating a pricing recommendation into something an EVP or SVP will act on without a follow-up meeting is work I have already done at a multi-$100M scale, and it is the same muscle your Corporate Strategy team needs to move a measurement framework from a dashboard into a decision.
