PITCH DECK | STUUT PRODUCT MARKETING MANAGER

Every Stuut release needs a skeptical AR or finance buyer to trust the agent's claim without a follow-up call. Turning technical capability into that exact story is the work I already do.

A launch, enablement and customer-proof system built from sensors, pricing programs and now AI agents, mapped onto the T1/T2/T3 motion Stuut runs today.

- **$2M+ first-year revenue** on an end-to-end GTM launch (Sensata)
- **+30% win rate** on enablement rebuilt after live rep feedback
- **1,200 opportunities, $627M target** scored by win rate and stage
- **30+ customer interviews** turned into case-study evidence, CSAT +22%
- **AI agents built on Claude** checked and signed off by me, today

WHY THIS DECK EXISTS

A launch does not land because the agent is good. It lands because Sales, CS and the buyer all trust the same story at the same time.

What that actually requires

A tiered launch process that keeps leadership, Sales and CS informed about what is shipping, when, and what changes for the buyer, not a calendar nobody reads.

Enablement materials reps actually use in a live call, plus a feedback loop that rewrites the weak ones instead of leaving them in the drive.

A customer-proof pipeline: beta customers and agreed success metrics before release, then 30/60/90-day results that become a case study, not a slide that ages out.

What I have already run

At **Sensata**, I owned end-to-end GTM for a new product line, positioning through channel through release, to $2M+ first-year revenue.

I built sales enablement, decks, demo scripts, win/loss debriefs, for 50+ reps, then rewrote it after rep feedback and win rates moved 30%.

I ran 30+ structured customer interviews that became case-study evidence and lifted CSAT 22%.

> **The through-line: every launch I have shipped had to survive a buyer who takes the evidence, not the pitch, at face value.**

THE MANDATE, MAPPED

What the posting asks for, and where the proof already sits.

What the role covers

> *"Translate how the agent works into clear messaging, demos, and practical sales tools."*

> *"Build and maintain a searchable proof library organized by persona, use case, and outcome."*

> *"You use AI tools to accelerate research and production while checking accuracy and making the final decisions yourself."*

My proof

Applied Materials, AI-agent judgment: runs AI agents built on Claude on recurring market analysis, checks the output, makes the final call before it reaches leadership.

Sensata, proof pipeline: 30+ OEM and distributor interviews turned into case-study evidence that raised CSAT 22%.

Sensata, enablement adopted: decks, demo scripts and win/loss debriefs for 50+ reps, rewritten after feedback, win rates up 30%.

Sensata Pricing, buyer-credible numbers: multimillion-dollar customer quotes negotiated directly with senior executives.

THE PROOF, IN DEPTH

The same launch-to-proof loop Stuut needs, run on sensors and on pricing before it ever touched AI.

Same pattern across two companies: launch to a skeptical buyer, enable the reps who sell it, then close the loop with evidence instead of adjectives.

$2M+

First-Year Revenue, End-to-End GTM

Owned positioning, pricing, channel and launch for a new Sensata sensing line across North America and Europe.

+30%

Win Rate After Enablement Rewrite

Decks, demo scripts and win/loss debriefs for 50+ reps, rebuilt once after live feedback from the field.

1,200

Opportunities Scored Against $627M

Sensata's Bleeders & Leakers pipeline: win rate, avg $/win and stage distribution by region and product line.

None of this sat in a folder. Each number closed a loop a Sales, CS or Finance stakeholder was accountable for, the same accountability an AR or finance buyer brings to a Stuut launch.

FIRST 30 DAYS

What the first month owning launch and proof at Stuut looks like.

WEEK 1

Map the launch backlog and the buyer objections

Pull the last several T1/T2/T3 launches and the call reviews behind them to find exactly where an AR or finance buyer stalled before trusting the agent's claim.

Why first: the same discovery move behind Sensata's 30+ OEM interviews.

WEEK 2-3

Ship the dual messaging brief

Draft the buyer case (what the agent does, where a person stays involved, why that matters) and the operator case (how CS and Sales demo it live), pressure-tested with reps on real calls.

Why now: the same rewrite-after-feedback loop that moved Sensata's win rate 30%.

WEEK 4

Stand up the proof library

Recruit beta customers and agree success metrics before the next release, with a 30/60/90-day capture cadence so case studies ship with the launch instead of months behind it.

Why this fast: the same validate-and-approve discipline behind every number I have put in front of a CFO.

CLOSE

Stuut's buyer needs evidence, not adjectives, before they trust the agent. I run that exact translation today.

The launch half: **end-to-end GTM** for a new Sensata product line to $2M+ first-year revenue, plus sales enablement rebuilt after live rep feedback that lifted win rates 30% for 50+ reps.

The proof half: **30+ customer interviews** turned into case-study evidence (CSAT +22%), and a Bleeders & Leakers pricing pipeline that scored **1,200 opportunities against a $627M target**. At Applied Materials today I run AI agents built on Claude and sign off on what they produce before it reaches leadership.
