

PITCH DECK | LOOP AI PRODUCT MARKETING MANAGER

**A first product marketing hire has to build the function, not fine-tune one that already exists. I have already run that exact build once, end to end, with the revenue to show for it.**

*A zero-to-one GTM and enablement track record, paired with the AI-workflow habit this role asks a first PMM hire to scale across positioning and competitive research.*

**Sensata GTM** - owned positioning, pricing, channel and launch zero-to-one, \$2M+ first-year revenue

**50+ reps / +30%** - enablement, battlecards and case studies that lifted win rates

**30+ interviews** - qualitative signal checked against SQL and GA4 data before it shipped

**AI agents on Claude** - in production use today, Applied Materials

**8-client, multi-vertical** - Pixis portfolio, a playbook per account

## Building a PMM function from zero is not a messaging problem first. It is **a trust problem across every team that has to repeat the same claim.**

### What that actually requires

A positioning architecture that holds across finance, operations, marketing and analytics, so the same module does not get three different pitches from three different teams.

Enablement and case studies the sales team actually reaches for mid-call, not a library of collateral nobody opens.

Claims that survive an engineering check before they reach a launch deck, and an AI-workflow habit that scales the research behind them without slowing it down.

### What I have already built at that exact seam

Owned **GTM end to end** for a brand-new Sensata product line, turning spec-sheet features into one customer value story that lifted conversion 15%, then built the enablement that lifted win rates 30% across 50+ reps.

Ran **30+ structured customer interviews** before writing a line of messaging, then checked that read against SQL and GA4 usage data across 50K+ connected devices before it shipped.

Automate **the repetitive side of market and pricing analysis** with AI agents built on Claude at Applied Materials today, the same habit this role asks a first PMM hire to scale.

The through-line: I have already built the one-message, claim-checked, AI-assisted loop this role is asking someone to stand up from zero, just on a different product line.

# What the Loop AI posting asks for, and where the proof already sits.

## What the role covers

- "Establish the product marketing function from inception, including positioning architecture and messaging systems."*
- "Verify all external claims and promises with engineering before they reach a launch."*
- "Leverage AI workflows to scale tasks, analyze customer data, and refine messaging."*

## My proof

- Sensata GTM, zero-to-one:** owned positioning, pricing, channel and launch for a brand-new product line end to end, driving \$2M+ in first-year revenue.
- A metrics-checked read, not a guess:** 30+ customer interviews plus SQL and GA4 usage data across 50K+ devices before any message shipped.
- AI agents on Claude:** already automating the repetitive side of market and pricing analysis at Applied Materials, in production today.
- Sales enablement that gets used:** decks, battlecards and case studies for 50+ reps that lifted win rates 30% on enterprise OEM and distributor accounts.

**Sensata: a blank product line to a \$2M+ launch, grounded in the people who had to buy it.**

Built as the GTM owner for a brand-new sensing line, positioning, pricing, channel and launch, not handed a positioning brief to execute after the fact.

30+

Structured Customer Interviews

OEM and distributor buyers, heard from before a single line of messaging got written.

50+ / 30%

Reps Enabled / Win-Rate Lift

Decks and case studies that gave the sales team one consistent pitch instead of five different ones.

\$2M+ / 15%

First-Year Revenue / Conversion Lift

The result of turning spec-sheet features into customer value language, not the other way around.

The same habit runs through Pixis: an 8-client portfolio, each with its own vertical playbook, the exact pattern a platform selling across restaurant and retail operators needs on day one.

# What the first month standing up Loop AI's PMM function would look like.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                     |

CLOSE

**Loop AI needs a PMM function built from zero, claims verified before they ship, and an AI-workflow habit that scales the work. I have already built exactly that once.**

The core proof is Sensata: a **\$2M+ zero-to-one GTM launch** with enablement that lifted win rates 30% across 50+ reps, built on 30+ customer interviews checked against real usage data before a line of messaging shipped.

What is harder to find is someone who has already run that full loop, customer input to positioning to enablement to a claim an engineer signed off on, on one product line. That is the exact scope this seat is asking someone to own from day one.
