Hiring Team, DoorDash

Your posting asks the person in this seat to own tracking dashboards and manage week over week metrics to drive high quality operations. That is close to verbatim the job I already did at Sensata: I built the FY2026 Bleeders and Leakers dashboard in Power BI from scratch, tracking 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, reviewed every week, and used it to surface $433M in margin gaps for leadership to act on by salesperson and product line.

The analytical half of the role, building models in Excel and SQL to weigh a program's costs and benefits before it scales, is also where I spend most of my time. At Applied Materials I size the semiconductor market by pulling Sales, Engineering and Accounts input into one shared view, then automate the repeatable parts of that analysis with AI agents built on Claude so more time goes to the judgment call a model cannot make on its own. At Sensata I ran 30+ structured interviews with OEMs and distributors before I wrote a single line of positioning, and let what they said change the plan; the positioning that came out of those conversations lifted conversion 15%.

I like building the tool as much as the recommendation that sits on top of it. The same from scratch habit is how I approached a market study for Safran in grad school: sizing TAM, SAM and SOM from 170 facilities down to a SAM of 28 with no existing model to start from, then presenting the plan to their leadership. A personalized onboarding journey for a new Grocery customer is a version of the same problem: find the number that actually predicts a second order, build the dashboard that tracks it weekly, and let the data say whether to scale, iterate or stop.

I would like to talk about which part of the Grocery funnel, onboarding, retention, or something upstream of both, is closest to its next pilot decision. More of the work is at adhithyabhaskar.vercel.app/ref/doordash.
