PITCH DECK | COREWEAVE SENIOR FINANCE ANALYST, GTM FINANCE

CoreWeave's GTM Finance team needs someone who turns deal economics into a commercial decision fast enough to keep pace with a hyper-growth sales org. I have already run that program, with a number on it.

Deal economics, financial modeling and margin analysis from someone who builds a deal-pricing decisioning product on the side.

- **$700K+** margin recovered in 2 quarters, Sensata Bleeders and Leakers program
- **53% to 61%** distributor margin lift via a repricing model built on deal data
- **PriceKeel** - founder of a deal-economics decisioning engine with a Finance audit trail
- **+12% YoY / +8% share** via price realignment benchmarked against 10+ competitors
- **AI agents built on Claude** automating recurring financial analysis

WHY THIS DECK EXISTS

The problem is not that CoreWeave lacks a deal desk. It is that a hyper-growth sales org generates commercial proposals faster than any manual P&L read can keep up, and someone has to turn each one into a financially sound, Sales-ready decision.

What this seat actually requires

Reviewing pricing requests and structuring commercial proposals so Sales gets a clear answer instead of a week-long back-and-forth.

Building financial models that assess deal economics, financial outcomes and P&L impacts well enough that Revenue leadership trusts the number.

Finding the creative path that balances what the customer is asking for against CoreWeave's own strategic and financial objectives.

What I have already run

At **Sensata**, I built a BU-wide Power BI system tracking 1,200 pricing opportunities against a $627M target across 3 regions and 20 product lines, the same deal-economics triage this seat runs on every commercial proposal.

At **PriceKeel**, I built a decision-integrity layer from zero that reads a live discount exception and returns an explainable guardrail with a P&L read and a Finance audit trail, the exact structuring judgment this role applies deal by deal.

I partnered directly with senior executives on **AP26 revenue models** and multimillion-dollar customer quotes, the same business-partner rigor this role brings to Account Executives and Revenue leadership.

The through-line: every deal I have touched started with "what does this actually do to the P&L" and ended with a recommendation Sales could act on the same day.

THE MANDATE, MAPPED

What the posting asks for, and where the proof already sits.

What the role covers

> *"Review pricing requests and support the structuring and evaluation of commercial proposals."*

> *"Build financial models and assess deal economics, financial outcomes, and P&L impacts."*

> *"Guide Sales partners with clear, actionable insights and data-driven recommendations."*

My proof

Structuring and evaluating commercial proposals: built the FY2026 Bleeders and Leakers Power BI dashboard surfacing $433M in margin gaps across 1,200 pricing opportunities for leadership to prioritize.

Financial models, deal economics and P&L impacts: closed AP26 revenue models and multimillion-dollar customer quotes with senior executives, and recovered $700K+ of margin through deal-by-deal negotiation.

Guiding Sales with data-driven recommendations: raised distributor and channel-partner margins from 53% to 61% by repricing parts sold through distribution so the gain held past renewal.

Pricing tools and AI-built tooling: founded PriceKeel's guardrail engine and automate my own recurring financial analysis with AI agents built on Claude at Applied Materials.

THE SENSATA PROOF, IN DEPTH

Bleeders and Leakers: find the margin leak, model the P&L impact, close it, make it hold.

Built as a BU-wide Power BI system covering 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, with pipeline funnel, win rate and stage distribution by product line, so leadership could prioritize instead of chasing anecdotes.

$433M

Margin Shortfall Surfaced

Ranked every pricing opportunity by competitive gap and customer willingness to pay, the same deal-economics triage a GTM Finance seat runs continuously.

$700K+

Margin Recovered in 2 Quarters

Closed through deal-by-deal negotiation on a documented P&L case, not an across-the-board policy change.

53% to 61%

Distributor Margin Lift

Repriced the channel structure itself, so the financial outcome held past the first renewal cycle instead of drifting back.

The same BU also drove +12% YoY revenue and +8% market share through price realignment benchmarked against 10+ competitors. The common thread: every fix was modeled on data, priced as a P&L case, and measured after it closed.

FIRST 30 DAYS

What the first month inside CoreWeave's GTM Finance team looks like.

WEEK 1

Map the deal and pricing-request data that already exists

Sit with Account Executives, Account Managers and Revenue leadership to find where today's commercial proposals already carry risk or opportunity that is not yet surfaced as a decision, the same discovery step that started the Bleeders and Leakers program at Sensata.

Why first: find the leak in the deal data before naming the fix.

WEEK 2-3

Ship the first deal-economics model and recommendation

Build the first financial model for a live commercial proposal, pressure-test the P&L impact and scenario range, and ship Sales a clear, data-driven recommendation instead of a open-ended review.

Why now: the same deal-by-deal modeling discipline that made the 53% to 61% distributor gain stick instead of drift back.

WEEK 4

Bring pricing tools into the deal desk workflow

Automate the recurring parts of that financial analysis with an AI agent, so the next pricing request starts from a flagged risk or margin opportunity instead of a blank model, the same habit that keeps deal review moving rather than waiting on it.

Why this fast: the same AI-agent habit that keeps my own recurring financial analysis moving at Applied Materials today, not a plan for someday.

CLOSE

You are hiring someone to turn deal economics into financially sound decisions Sales can act on the same day. I have already run that program, with a number on it each time.

The margin half: **$700K+ recovered in 2 quarters** and distributor margins lifted **from 53% to 61%** at Sensata, plus +12% YoY revenue and +8% market share through price realignment benchmarked against 10+ competitors.

The build half: **PriceKeel's decision-integrity layer** and Finance audit trail, built from zero, running my own CRM, CPQ and deal approvals end to end. At Applied Materials I automate my own recurring financial analysis with AI agents built on Claude instead of rebuilding the same model every cycle.
