Hiring Team, Momentive Software

Your posting asks for someone who owns a win-loss program end to end: design the interviews, run them, and turn the output into something Product actually uses. I built that exact muscle at Sensata, where I designed and ran 30+ structured interviews with OEMs and distributors, synthesizing pain points directly into product enhancements that lifted CSAT 22%. That is the same loop a win-loss program runs on, interview design, execution, synthesis, just without the label on my title.

The persona and ICP work is just as direct a match. On a Simon Vision Consulting engagement for Safran, I built buyer personas and journey maps across four verticals, aerospace, defense, healthcare and scientific research, inside a TAM/SAM/SOM model that took a facility list of 170 down to a defensible SAM of 28, then presented the market-entry case to Safran's own leadership. At Sensata I benchmarked competitive pricing across 10+ key players, work that fed a price realignment driving +12% YoY revenue and +8% market share.

You list Claude and Copilot as tools, and that is not a box I would be checking for the first time. At Applied Materials I already run AI agents built on Claude to automate the repetitive side of market and competitive research, which is exactly the edge a market intelligence function needs if insight is going to show up in roadmaps instead of sitting in a deck nobody reopens.

What I would bring to Momentive is someone who has already sat across the table from executives with evidence instead of opinions, presenting AP26 revenue models and site-transition strategy to Sensata's leadership, and who treats competitive and customer research as a strategy input rather than a once-a-quarter report. Proof trail at adhithyabhaskar.vercel.app/ref/momentive-software.
