Hiring Team, Zuora

Your posting names Claude Code by name as the tool you want someone building reporting scripts, automating data pipelines and accelerating ad-hoc analysis with. That is not a tool I would need to ramp on. At Applied Materials I already run AI agents built on Claude against my own repetitive GTM reporting and analysis work, the same workflow your posting describes, just pointed at a different product line.

The forecasting and dashboard half of the role is where I have spent the last year. At Sensata I built the FY2026 Bleeders and Leakers Power BI dashboard: 1,200 pricing opportunities tracked against a \$627M target by win rate, dollar-per-win and stage distribution across 3 regions and 20 product lines. That dashboard surfaced \$433M in margin gaps and let leadership prioritize by salesperson and product line instead of guessing, which fed into a \$700K margin recovery over two quarters. I also partnered with senior executives on the AP26 revenue models that fed our regional pipeline reviews, which is close to the standardized forecasting framework and review process your team is building out.

I run this same operator loop at PriceKeel, the company I founded: I own the CRM, CPQ, forecast reviews and deal approvals myself, with an audit trail Finance can check on demand, so I know firsthand what it takes to keep a forecasting process honest across Sales, Marketing, Engineering and Finance stakeholders who all want a different cut of the same number.

Zuora's own subscription and usage-based billing platform is the kind of recurring-revenue business model my forecasting and pipeline work has been built around. Proof trail at adhithyabhaskar.vercel.app/ref/zuora.
