Hiring Team, Google

Your posting lists App Store optimization, in-app onboarding and engagement flows as the surface of this role, but the harder ask underneath is a GTM campaign built on a value proposition that actually fits iOS consumer behavior. I built that discipline at Sensata: I wrote the positioning and messaging that turned sensor-engineering detail into language buyers acted on, took that new line to \$2M+ first-year revenue, and lifted conversion 15% on the launches that mattered most.

The part of this req I'd point to first is the roadmap seat, not the campaign that follows it. I ran 30+ customer interviews at Sensata and fed the findings straight into a 100+ feature backlog I managed with Engineering in Agile across 3 regions, cutting time-to-market 20%. Earlier, at Pixis, I ran iOS app user acquisition through Appsflyer and Adjust, optimizing paid channels against in-app engagement and conversion KPIs, so alpha and beta feature testing feedback loops are not new to me. I now run a version of the same cross-functional motion at Applied Materials, pulling Sales, Engineering and Accounts into one market view.

Your preferred qualifications ask for AI productivity tools applied to real workflow problems. I automate recurring market and pricing analysis with AI agents built on Claude in my current role, and before that I shipped an AI product zero-to-one on my own: PRD, MVP, positioning and launch.

Mountain View is where the iOS roadmap gets shaped before it gets marketed, and that is the seat I want: close enough to Product and Engineering to represent the user, accountable for the campaign that follows. Proof trail at adhi-product-ai.vercel.app/ref/google. Happy to talk whenever works on your side.
