Hiring Team, Amazon Web Services (AWS)

At Sensata I built the FY2026 Bleeders and Leakers Power BI dashboard: 1,200 pricing opportunities against a \$627M target, tracked by win rate, average dollar per win and pipeline stage distribution, broken out by salesperson and by product line. That dashboard is what the weekly and quarterly business reviews ran on, and it surfaced \$433M in margin gaps that leadership then prioritized by owner. The KPI definitions and goal cascades your posting asks someone to document and implement are the same discipline that dashboard forced onto a business running 20 product lines across 3 regions.

Pipeline qualification and attribution is not new to me either. On Sensata's Product and Growth Marketing team, campaigns I ran generated 35% more qualified leads, and Sales then had to qualify and forecast against that pipeline, so I learned early where attribution breaks between a marketing team and a quota-carrying one. Today at PriceKeel, the company I founded, I run the CRM and CPQ, the forecast and pipeline reviews, and the deal approvals myself, and I built the audit trail that lets Finance check a pricing decision against the deal data directly, not a spreadsheet reconstructed after the fact.

The AI-human collaboration your posting describes is already how I work. At Applied Materials I automate the repetitive parts of my own forecasting and market-sizing analysis with AI agents built on Claude, and at Sensata I built the sales enablement, decks and case studies that got 50-plus reps actually using a new pitch, not just trained on one, which is the adoption problem behind any AI sales tool rollout. Standardizing a process is one thing. Getting a distributed sales org to actually run on it is the harder half, and it is the half I have already done twice.

ASP is scaling fast enough that the operational rigor behind it has to move at the same speed as the growth, and that is the kind of environment where I do my best work. Proof trail at adhithyabhaskar.vercel.app/ref/aws.
