Hiring Team, Wispr Flow

Your posting says the strongest candidates rarely check every box, so here is the one I do check: I have already built revenue operations from zero on a lean team, in code, and run it myself. At PriceKeel I set up the CRM, CPQ, forecast and pipeline reviews, and deal approvals from scratch, with an audit trail Finance can review for every pricing exception. That is the founding-role problem you are describing, just solved once already.

The deal desk and quote-to-cash piece is not new either. At Sensata I built the Bleeders & Leakers Power BI pipeline, 1,200 opportunities against a $627M target, and used it to recover $700K+ in margin in two quarters while raising distributor and channel-partner margins from 53% to 61%, repricing parts sold through distribution. I also shaped AP26 revenue models and multimillion-dollar customer quotes alongside senior executives, which is the same deal-structure and pricing-approval muscle a quote-to-cash build asks for.

What I think fits this seat specifically is the AI-native part. At Applied Materials I automate repetitive revenue analysis with AI agents built on Claude, and PriceKeel itself is built that way: process defined in code and versioned in a repo, not clicked together in a tool's setup screen. That is the exact shift your posting asks for, bringing AI into the core of ops instead of bolting it on afterward, and I would rather build the agentic workflow than write the one-off spreadsheet.

I would like to build that founding function with your VP of Revenue Operations. Proof trail at adhi-pricing-ai.vercel.app/ref/wispr-flow.
