PITCH DECK | WISPR FLOW REVENUE OPERATIONS

A founding RevOps seat needs someone who has already built the function once, in code. I have.

CRM, CPQ, forecast and pipeline reviews, deal desk and quote-to-cash, and the agentic workflows that run on top of all three.

- **CRM, CPQ, forecast and pipeline reviews** built from scratch as founder of PriceKeel
- **$700K+** in margin recovered in 2 quarters via a deal-desk discounting program
- **53% to 61%** distributor margin lift through repricing
- **$627M** pipeline, 1,200 opportunities, tracked to win rate and stage
- **Claude AI agents** automating revenue analysis, built in code and versioned in a repo

WHY THIS DECK EXISTS

A founding RevOps hire does not lack a job description. It lacks someone who has already run the function solo and can show the receipts.

What a founding RevOps seat runs into

The scope is operating cadence, lead-to-pipeline, deal desk and quote-to-cash, and a GTM data model, all at once, with no team yet to hand pieces off to.

Most candidates have owned one or two of those lanes inside an existing function. Almost none have stood up all of them from a blank page, alone, and still closed the loop on reporting.

The AI-native part raises the bar further: building agentic workflows in a repo instead of configuring another SaaS tool is a different skill than running one.

What I have already run, at comparable scale

At **PriceKeel**, I set up the CRM, CPQ, forecast and pipeline reviews, and deal approvals myself, with an audit trail Finance can review, built in code and versioned in a repo.

At **Sensata**, I ran deal desk and quote-to-cash issues end to end: discounting analysis on 1,200 opportunities against a $627M target, recovering $700K+ in two quarters.

At **Applied Materials** now, I automate repetitive revenue analysis with AI agents built on Claude, the exact habit this role asks for across enrichment, hygiene and reporting.

> **This req asks for operating cadence, lead-to-pipeline, deal desk and quote-to-cash, a GTM data model, and AI brought into the core of ops. That is the founding loop above, run twice already on two different books of business.**

THE REQ, MAPPED

What the Revenue Operations opening asks for, and where the proof sits.

What the role covers

> *"Run the operating cadence and planning: forecast, pipeline reviews, stage and hygiene discipline, territories, quotas, targets, capacity and coverage."*

> *"Stand up the deal desk and quote-to-cash: deal structure, pricing and discount approvals, quoting, and the handoff from closed-won to provisioned and billed."*

> *"Bring AI into the core of ops: build it in code, versioned in a repo rather than clicked together in setup."*

My Proof

CRM, CPQ, forecast and pipeline reviews at PriceKeel: the operating-cadence problem, solved solo, before there was a team to hand it to.

Bleeders and Leakers at Sensata: deal structure and discount approvals on 1,200 opportunities against a $627M target, closing $700K+ in two quarters.

AP26 revenue models and customer quotes: shaped alongside senior executives, the same deal-desk judgment this req asks for on pricing and discount approvals.

Claude AI agents: automate recurring revenue analysis at Applied Materials, built in code and versioned in a repo, not clicked together in setup.

THE SENSATA PROOF, IN DEPTH

Bleeders and Leakers: a deal desk problem solved against a $627M book.

Built as a BU-wide Power BI system covering 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, with pipeline funnel, win rate and stage distribution by salesperson and product line.

$433M

Margin Gaps Surfaced

Ranked every discounting opportunity into one view instead of chasing anecdotes deal by deal.

$700K+

Margin Recovered in 2 Quarters

Closed through structured deal-desk negotiations grounded in competitive gaps and documented willingness to pay.

53% to 61%

Distributor Margin Lift

Repricing parts sold through distribution, the quote-to-cash half of the same program.

The same role carried AP26 revenue models and multimillion-dollar customer quotes alongside senior executives. The common thread: every case started from a pipeline-stage question and ended in a deal-desk decision leadership could act on.

FIRST 30 DAYS

What the first month building Wispr Flow's Revenue Operations function looks like.

WEEK 1

Map the lead-to-pipeline flow

Sit with the VP of Revenue Operations, Sales and CS to learn how a lead currently moves from qualification and routing to a rep, and where the SLA chain already breaks.

Why first: the same move that started PriceKeel's CRM and CPQ setup, map what exists before building anything new.

WEEK 2-3

Stand up the deal desk

Build deal structure, pricing and discount approvals against real deal data, pressure-tested with Sales on 1 to 2 live quote-to-cash questions.

Why now: building it against a real deal, not in a vacuum, is what made the 53% to 61% distributor gain at Sensata hold.

WEEK 4

Ship the first agentic workflow

Automate one manual-load task, enrichment or account research, in code and versioned in a repo, then report conversion and SLA numbers in Hex and Salesforce.

Why this fast: the same habit that keeps Claude agents running recurring revenue analysis at Applied Materials today.

CLOSE

You are hiring someone to build the revenue function from zero. I have already built that function, twice.

The core proof is Sensata: **$700K+ recovered in 2 quarters** and a **53% to 61% distributor margin lift**, both run through a deal-desk program built from scratch against a $627M-opportunity Power BI pipeline.

What is harder to find is someone who has also built the operating cadence as the founder: at **PriceKeel**, the CRM, CPQ, forecast and pipeline reviews, and deal approvals are mine end to end, and at Applied Materials today that same discipline runs on Claude AI agents, built in code and versioned in a repo.
