Hiring Team, Applied Intuition

Your posting describes Data Engine's job as becoming "a coherent platform that technical teams can discover, adopt, and rely on," and that reconciling-competing-needs problem, deciding what belongs in a shared capability versus what stays program-specific, is the exact shape of work I own today. At Sensata I ran the product roadmap for a new sensing-product line and managed a 100+ feature backlog across 3 regions, and the hardest calls were never the roadmap items themselves; they were which capabilities to build once for every engineering team and which to leave program-specific. That discipline cut time-to-market 20% and accelerated releases 25%.

Your posting also asks for someone who can tell a requested feature apart from the underlying problem. I ran 30+ customer interviews with OEMs and distributors before committing to a product bet, then built KPI frameworks in SQL and GA4 across 50K+ connected devices to separate accounts that actually adopted a change from ones that stalled, lifting feature adoption 18%. That same evidence-before-commitment habit is what I would bring to Data Engine's internal customers, the engineers and researchers building autonomy inside Applied.

The external half of this role, packaging and a commercial roadmap with sales partners, is where my pricing background adds something most product candidates will not have. As Pricing Lead at Sensata I set pricing and commercial terms for a multi-$100M business unit, recovered $700K+ in margin in two quarters, and raised distributor margins from 53% to 61%, work that lives entirely in the space between "what the product does" and "what it is worth to the customer buying it." Deciding what a shared internal platform's external packaging should cover is the same judgment call.

I would welcome the chance to talk through how I would sequence Data Engine's internal adoption work against its external commercial roadmap. More of this build-and-commercialize work, including a zero-to-one product I shipped myself, is at adhi-product-ai.vercel.app/ref/applied-intuition.
