Hiring Team, Expedia Group

Your posting describes a Co-Op channel that has to go from a manually configured, market-by-market model to a coordinated, self-service campaign experience. I have run that exact shift from the inside. At Pixis I managed retail-media and programmatic ad campaigns on Amazon Ads, Criteo and a stack of DSPs for an 8-client advertiser portfolio, each partner with its own budget, creative and reporting cadence. Reading which signals actually drove ROAS there, not which ones just looked good in a dashboard, cut client churn 50% and delivered 3x ROAS in one month for one account through a full-funnel rebuild: feed cleanup, smart bidding, creative refresh, lookalike expansion.

Owning a product that spans complex, multi-party workflows is the other half of this req, and it is work I already run. At Sensata I own the product roadmap and a 100+ feature backlog for sensor integrations, standardizing a scalable launch process that moves new products through engineering and then through channel and distributor partners across 3 regions, cutting time-to-market 20%. Thirty-plus structured interviews with OEMs and distributors told me exactly where that partner-facing workflow broke, and fixing it lifted CSAT 22% and feature adoption 18%, the connective tissue between partner needs and measurable outcomes this role asks for.

The agentic AI piece is not new territory either. I build AI agents on Claude at Applied Materials to automate the repetitive side of market and competitive analysis, the same move from manual configuration to guided, automated workflow this posting wants inside campaign planning and creative selection. I also built SwipeHire, an AI matching product, zero to one: wrote the PRD, scoped the MVP, and ran the GTM and analytics stack myself.

I would welcome the chance to talk through how this maps to the Travel Supply Campaigns roadmap. Proof trail at adhi-product-ai.vercel.app/ref/expedia-group.
