PITCH DECK | EXPEDIA GROUP SR. PRODUCT MANAGER, EG ADVERTISING - TRAVEL SUPPLY CAMPAIGNS

This req asks for three things at once: retail-media-grade campaign instincts for Co-Op and supply advertisers, a self-service lifecycle that replaces manual market-by-market setup, and an agentic AI layer guiding advertisers through it. I already run all three.

An 8-client ad-campaign portfolio, a 100+ feature backlog standardized across partners, and AI agents automating the repetitive side of the analysis, on the same calendar as everything else.

- **8-client ad portfolio** on Amazon Ads, Criteo and DSPs at Pixis, reading which signals actually drove ROAS
- **100+ feature backlog** standardized across channel and distributor partners at Sensata, -20% time-to-market
- **3x ROAS in one month** via a full-funnel campaign rebuild for a leading brand
- **30+ partner interviews** (OEMs, distributors) finding where the multi-party workflow broke
- **AI agents built on Claude** automating the repetitive side of campaign and market analysis

WHY THIS DECK EXISTS

The req reads as one title. It is really three disciplines that have to run as one loop.

What the role actually requires

Build guided, objective-led campaign configuration and creation experiences within an agentic AI workflow, while safely integrating AI/ML-enabled solutions that improve campaign outcomes.

Simplify the campaign lifecycle from planning and enrollment through configuration, creative and supply selection, launch, optimization and reporting, including partner self-service enrollment.

Own the strategy and roadmap for the Co-Op channel, evolving it into a coordinated, end-to-end campaign experience across lodging, air and car.

What I have already run

At **Pixis**, I ran retail-media and programmatic campaigns on Amazon Ads, Criteo and DSPs for an 8-client advertiser portfolio, reading which signals actually drove ROAS before trusting them, the same discipline this req wants inside guided campaign configuration.

At **Sensata**, I standardized a scalable launch process moving a 100+ feature backlog through engineering, channel and distributor partners across 3 regions, the multi-party lifecycle this req is building for Co-Op.

At **Applied Materials**, I build AI agents on Claude that automate the repetitive side of market and competitive analysis, the same shift from manual configuration to agentic workflow this role wants in campaign planning.

The through-line: every campaign or product call I have made started with reading the actual performance signal myself, not a model handed down from someone else.

THE MANDATE, MAPPED

What the posting asks for, and where the proof already sits.

What the role covers

> *"Simplify the campaign lifecycle from planning and enrollment through configuration, creative and supply selection, launch, optimization, and reporting, including partner self-service enrollment."*

> *"Build guided, objective-led campaign configuration and creation experiences within an agentic AI workflow."*

> *"Own the strategy and roadmap for Expedia Group Advertising's Co-Op channel, evolving it into a coordinated, end-to-end campaign experience."*

> *"Use customer research, product analytics, experimentation, and performance data to improve traveler relevance, advertiser value, conversion performance."*

My proof

Pixis, full campaign lifecycle: ran retail-media and programmatic campaigns end to end for an 8-client portfolio, delivering 3x ROAS in one month through a full-funnel rebuild (feed cleanup, smart bidding, creative refresh, lookalike expansion).

Applied Materials, agentic habit: builds AI agents on Claude that move repetitive analysis from manual to automated, the same agentic shift this req wants inside campaign configuration.

Sensata, multi-party channel ownership: owns the roadmap and 100+ feature backlog, standardizing how launches move through channel and distributor partners across 3 regions.

Sensata, measurable outcomes: 30+ structured interviews with OEMs and distributors turned into KPI and attribution frameworks that lifted feature adoption 18% and CSAT 22%.

THE PROOF, IN DEPTH

Read the real performance signal first, then let the campaign call and the partner rollout follow it, not the other way around.

Same pattern across every stop: read the actual signal, make the campaign or product call from it, then carry it through partners until it ships.

8-Client Portfolio

Retail-Media & Programmatic Campaigns

Ran Amazon Ads, Criteo and DSP campaigns at Pixis across an 8-client, $15K-$90K/month advertiser portfolio, cutting churn 50% by reading which signals actually drove ROAS.

100+ Features

Backlog Standardized Across Partners

Owned the Sensata roadmap and backlog, standardizing how new launches moved through channel and distributor partners across 3 regions, cutting time-to-market 20%.

3x ROAS

In One Month, Full-Funnel Rebuild

Delivered for a leading fashion brand through feed cleanup, smart bidding, creative refresh and lookalike expansion, the same playbook a stalled supply campaign needs.

None of these campaigns or backlogs ran on autopilot. Each one started with me reading the signal, then making the call.

FIRST 30 DAYS

What the first month owning this mandate looks like.

WEEK 1

Map the current supply-campaign and Co-Op picture

Pull the existing campaign configuration, creative and reporting flows for lodging, air and car supply advertisers, and find where the self-service enrollment and partner workflow is thinnest.

Why first: the same first move behind reading the Pixis advertiser portfolio before touching a single campaign.

WEEK 2-3

Run one supply campaign end to end

Pick the highest-stakes supply vertical, rebuild its campaign lifecycle (enrollment, configuration, creative, launch, reporting) with product, engineering, analytics and commercial, and turn it into a measurable outcome.

Why now: the same build that standardized Sensata's 100+ feature backlog across channel and distributor partners.

WEEK 4

Stand up the agentic configuration layer

Automate the repetitive side of campaign configuration and creative selection with the first AI agent, built on Claude, so advertisers get a guided, objective-led setup instead of a manual one.

Why this fast: the same habit that keeps my own market and competitive reporting moving today.

CLOSE

This req is three disciplines stitched into one title: a self-service Co-Op lifecycle, agentic AI-guided campaign configuration, and measurable outcomes for travel supply advertisers. I have already put a number on each one.

The campaign half: an **8-client retail-media and programmatic portfolio** at Pixis, delivering **3x ROAS in one month** and cutting churn 50%.

The partner-workflow half: a **100+ feature backlog** standardized across channel and distributor partners at Sensata, cutting time-to-market 20% and lifting CSAT 22%. The agentic AI half: AI agents built on Claude now automating the repetitive side of market and campaign analysis.
