Hiring Team, Avataar Skincare Technologies

Your posting is for someone who can sit inside a founder's ambiguity and turn it into a plan, across market research, cross-department coordination, analytics and process work with minimal supervision. I have been doing exactly that from the other side of the table: as the founder of PriceKeel, I built the CRM, CPQ and deal-approval process from zero, coordinated the investor updates for our first round, and ran product and pilots at the same time, because there was no one else to split that work with.

The analytics half of your posting, SQL and relational databases, advanced Excel, and dashboards that turn scattered data into a decision, is the same shape as the Bleeders and Leakers program I ran at Sensata. I built the FY2026 Power BI dashboard that turned 1,200 scattered pricing opportunities into a tracked plan against a $627M target across 3 regions and 20 product lines, and that process optimization is what recovered $700K+ in margin in two quarters. I have also run market research and competitive analysis directly for D2C e-commerce clients, at Pixis across international markets and retail media, and at GenY Medium, where rebuilding catalog feeds delivered 16x ROAS for D2C brands, so the consumer side of your business is not new ground for me.

Cross-department coordination with no single owner is also familiar. At Applied Materials I turn input from Sales, Engineering and Accounts into one market view for leadership, and on a market-sizing project for Safran I led a 5-consultant team from 170 facilities down to a SAM of 28, then presented the recommendation directly to their leadership.

What I would bring to Avataar's founder's office is comfort building the process a fast-moving company does not have yet, and the analytical habit of checking whether the data is already answering the question. Proof trail at adhithyabhaskar.vercel.app/ref/avataar-skincare-technologies.
