Hiring Team, Everpure

Your posting asks for someone who turns win/loss patterns into battle cards and messaging that let Field Sales Engineers and Account Executives win on their own. I ran that exact loop at Sensata: built the Bleeders and Leakers competitive-gap program, turned win/loss and benchmarking signal across 10+ key players into price and positioning moves, and recovered \$700K plus in margin in two quarters while driving market share up 8%. The sales-enablement materials I built from that same analysis, decks and case studies grounded in real competitive data, armed 50+ field reps and lifted win rates 30%.

The part of this role about shaping analyst and executive narratives is also familiar ground. At Sensata I sat with senior executives on multimillion-dollar customer quotes and revenue models, translating competitive and technical detail into the story Sales carried into the room. At Applied Materials I do the same work on the pricing side: I build competitive, value-based pricing for a market still finding its inflection points, working across Sales, Engineering and Accounts so the market view everyone operates from is the same one. Turning dense technical and competitive detail into a narrative an executive, an analyst or a Fortune 500 buyer can act on is the thread running through both roles.

Cross-functional leadership without direct authority is how I have always had to work. Sales, Engineering and Accounts do not report to Strategic Marketing at Applied Materials any more than Sales Leadership and Competitive Intelligence will report to this role, and the Sensata GTM launch I owned (positioning, pricing, channel and launch for new sensing products, driving \$2M plus in first-year revenue) only moved because Product, Sales and distributors agreed on the plan at the same time. I bring that habit of building alignment rather than assuming it.

Automating the busywork behind that narrative work is something I already do: I run Claude AI agents against recurring market and pricing analysis at Applied Materials, which is the same instinct I would bring to keeping competitive intel current as FlashArray File's market position shifts quarter over quarter.
