Hiring Team, Husch Blackwell

Your posting asks for someone to support rate-setting, track profitability and turn a pricing database into reports the Pricing team can act on. That is close to the program I built at Sensata: the FY2026 Bleeders and Leakers dashboard in Power BI, ranking 1,200 pricing opportunities against a $627M target across 3 regions and 4 product families, which I used to recover $700K in margin in 2 quarters by repricing where the numbers showed a shortfall, not where it was comfortable to look.

The repricing itself maps directly to the annual rate-setting work in your req. Raising distributor and channel-partner margins from 53% to 61% meant finding where the old pricing logic had drifted, then writing up the new numbers so Finance and leadership could sign off on them, the same documentation an alternative-fee proposal estimate needs to survive a Partner's review. I was also shaping multimillion-dollar customer quotes with senior executives during that stretch, so I am used to building the kind of financial model that has to hold up once someone with budget authority starts asking questions about it.

Before Sensata, I ran client-level P&L for an 8-client portfolio at Pixis, each with its own monthly budget and its own profitability number I owned end to end. That is the closest analog I have to tracking matter profitability across a client roster, and it is where most of my Excel and dashboard habits were built: a client's numbers had to be current enough that I could walk into a review and defend them, not just report them.

I am also building PriceKeel right now, a tool that reviews a live discount exception and recommends a guardrail with an audit trail Finance can act on. Building that has put me on the inside of the exact problem a pricing database is supposed to solve: how to make a rate decision defensible after the fact, not just reasonable in the moment. That is the habit I would bring to this seat.
