Hiring Team, Amazon Web Services (AWS)

Your posting describes ABM as something you build for scale, not a one-off campaign checklist, and that is the part I would push on in an interview: the hard part is measurement, not messaging. At Sensata I built a Power BI dashboard that prioritized 1,200 pricing opportunities against a $627M target across 20 product lines, surfacing $433M in margin gaps that leadership could act on by account and by product line. That is the same muscle this role is asking for: turn account and customer data into a prioritized plan, not a target list.

The strategic-partner-to-Sales half of the role is familiar too. I sat with Sensata's senior executives on AP26 revenue models, site-transition strategy and multimillion-dollar customer quotes for the company's largest accounts, which meant showing up with the number and the reasoning behind it, not handing off a deck. I also built the sales enablement, case studies and competitive positioning that took 50+ reps to a 30% higher win rate, work that depended on the same account-level content and messaging this req calls out.

Cross-org coordination is where I have logged the most hours, even if the org chart looked different each time. At GenY Medium I was the liaison holding one campaign consistent across regional marketing, localization and analytics teams instead of letting each market freelance its own version; at Pixis I ran account strategy for 8 enterprise clients I did not have a direct reporting line to, each with its own P&L, cutting churn 50% through account-specific playbooks rather than bigger budgets. NAMER's named sub-orgs (Global CoE, Industry, Partner, Digital, Events) are a bigger version of the same coordination problem.

Now, as Strategic Marketing III at Applied Materials, I automate the repetitive parts of that analysis with Claude AI agents so the account strategy work gets the hours instead. Proof trail at adhi-product-ai.vercel.app/ref/aws.
