Hiring Team, Spyne

Your posting says the CEO's time is the company's scarcest resource and the Chief of Staff's job is to protect it. I already run that trade for myself: at PriceKeel I am the CEO who has to write the investor narrative, build the data room and still run the CRM, pipeline reviews and deal approvals end to end, because there is no one else to hand it to. That is the same operating-system instinct your posting describes, just compressed to one person instead of a 200-person company.

The board and numbers side of the role is not new territory either. At Sensata I built the FY2026 Bleeders and Leakers Power BI dashboard, scoring 1,200 pricing opportunities against a $627M target across 3 regions and 20 product lines, and used it to surface $433M in margin gaps as board-ready information leadership could act on the same week, not a report that just looked thorough. I turned that into $700K plus recovered in two quarters by negotiating the outcome with distributors directly. Building a model from scratch and defending every assumption in front of executives is a routine I already keep, not one I would be starting at Spyne.

The cross-functional piece is where I think I can move fastest for you. At Applied Materials I turn scattered input from Sales, Engineering and Accounts into one market-sizing view every quarter, and I run the OKR cadence and leadership decks behind the weekly and quarterly reviews that keep those functions pointed at one number instead of three. I automate the repetitive half of that work with AI agents built on Claude, which is the same habit your posting is asking the leadership team to bring: build the internal tool yourself over a weekend instead of writing a spec and waiting for someone else to.

I would like to talk about what the first quarter of this seat looks like at Spyne, starting with the operating rhythm underneath the board deck. Proof trail at adhithyabhaskar.vercel.app/ref/spyne.
