PITCH DECK | SIERRA PRODUCT MARKETING MANAGER

Every new agent launch needs its own buyer-specific story. I have already built that story, shipped it to 50+ reps, and watched win rates move.

Positioning, launches and sales enablement, built by a marketer who also automates the repetitive half with AI agents.

- **$2M+** first-year revenue from a GTM owned end to end at Sensata
- **+30% win rate** from sales enablement built for 50+ reps
- **+15% conversion** on priority launches after a positioning rewrite
- **Claude AI agents** run the recurring go-to-market analysis today
- **16x ROAS** rebuilding product feeds and catalog data at GenY

WHY THIS DECK EXISTS

The hard part is not writing one good launch. It is making the next one fast without losing the buyer-specific translation.

What a lean, evolving team runs into

Sierra's agents sit in front of different industries and buyers, so every launch needs its own positioning, its own sales playbook, and its own industry or persona translation before a rep can use it.

A lean team cannot rebuild every deck, landing page and demo from scratch each cycle. Going broad across channels or deep on one area, as the role describes, both demand a system, not a one-off.

The fix is AI-first automations and templates: a way to turn the pattern that already closed deals into something the next launch starts from, instead of a blank page.

What I have already run, at smaller scale

At **Sensata**, I owned the GTM for a new sensing line end to end across North America and Europe: positioning, pricing, channel and launch, closing the year at $2M+ revenue.

I rewrote the positioning so technical sensor capability read as buyer value, lifting conversion **15%** on priority launches, then built the enablement **50+ reps** carried into the field.

I run the AI-first habit daily at **Applied Materials**, automating recurring go-to-market analysis with agents built on Claude instead of doing it by hand every cycle.

Shaping messaging and positioning for features, products, industries and buyers, then building the sales playbooks and AI-first templates that make the next launch faster, is the exact loop above: position it, enable sales, measure it, template it, repeat.

THE REQ, MAPPED

What the Product Marketing Manager opening asks for, and where the proof sits.

What the role covers

> *"Shape messaging and positioning for features, products, industries and buyers."*

> *"Lead product launches, including industry- and buyer-specific translation."*

> *"Build sales playbooks and assets: decks, landing pages, demos. Build AI-first automations and templates."*

> *4+ years of product marketing, fluency with tools like ChatGPT or Claude, comfort on a lean, evolving team.*

My Proof

Sensata GTM, owned end to end: positioning, pricing, channel and launch for a new sensing line across North America and Europe, closing the year at $2M+ first-year revenue.

Positioning rewrite: turned technical sensor capability into buyer-ready value, lifting conversion 15% on priority launches, after 30+ interviews with OEMs and distributors.

Sales enablement built, not just handed off: decks, case studies and playbooks for 50+ reps, lifting win rates 30%.

AI-first automation today: AI agents built on Claude run recurring go-to-market analysis at Applied Materials; shipped an AI product (SwipeHire) solo, PRD to launch.

THE SENSATA PROOF, IN DEPTH

One launch, the whole loop: position it, enable sales, measure it.

GTM owned end to end for a new sensing line across North America and Europe: positioning, pricing, channel decisions and launch sequencing, with competitor and customer tracking across EMEA and the US feeding every call.

$2M+

First-Year Revenue

The GTM for the new sensing line, owned end to end rather than handed off in pieces to other teams.

+30%

Win Rate, 50+ Reps Enabled

Decks, case studies and playbooks built so sales could carry the positioning into the room themselves.

+15%

Conversion on Priority Launches

A positioning rewrite that turned technical sensor detail into language buyers acted on.

The positioning itself came from 30+ customer interviews with OEMs and distributors run before launch, not after, so the messaging was pressure-tested against real buyer language instead of a guess.

FIRST 30 DAYS

What the first month on Sierra's product marketing team looks like.

WEEK 1

Learn the current launch motion

Sit with product, sales and agent development to map which industries, personas and launches are live right now, and which messaging has actually closed deals versus just shipped.

Why first: the strongest positioning pattern is usually visible in what already closed. Same move that drove the 15% conversion lift at Sensata.

WEEK 2-3

Ship one launch end to end

Take one upcoming feature or industry launch through positioning, the sales playbook (deck, landing page, demo) and buyer-specific translation, working directly with sales and agent development.

Why now: building the story on a live launch, not a hypothetical, is what made the Sensata enablement actually get used by 50+ reps.

WEEK 4

Template the AI-first system

Turn what worked into a reusable AI-first automation, built with Claude or ChatGPT, so the next launch or industry translation starts from a template instead of a blank page.

Why this fast: a template only earns its name once a second launch runs through it without a rebuild.

CLOSE

You are hiring someone to make launches repeatable without losing the buyer-specific edge. I have already run that loop once, and I run the AI-first habit every day that keeps it fast.

The core proof is Sensata: a GTM owned end to end to **$2M+ first-year revenue**, a positioning rewrite that lifted conversion **15%**, and sales enablement that moved win rates **30%** across 50+ reps, all pressure-tested with 30+ customer interviews before launch.

What is harder to find is someone who already runs the AI-first half too. **AI agents built on Claude handle my recurring go-to-market analysis right now** at Applied Materials, and I shipped an AI product solo from PRD to launch, so the automation-and-template habit is not something I would need to learn on the job.
