Hiring Team, LH2 AI Labs

Your posting names the Tier-1 colleges you want this from, IITs, BITS, NITs, SRCC, St. Stephen's, and my BE is from BITS Pilani. The rest of the role, taking a vertical from a blank sourcing map to a closed, revenue-carrying business, is the same shift I made the day I started PriceKeel: I built its CRM, CPQ and deal-approval process from zero, and I am the one negotiating terms with early partners and raising its first round myself. Nobody handed me a playbook for any of it.

The deal-structuring half of this role is a direct match to what I did at Sensata. The Bleeders and Leakers program started as a vague margin mandate; I turned it into a $433M shortlist of 1,200 opportunities across 3 regions and 20 product lines, then closed the negotiations myself on competitive gaps and customer willingness to pay, recovering $700K+ in two quarters and moving distributor margins from 53% to 61%. That is structuring non-standard terms and closing end to end, not recommending someone else do it.

The supply and sourcing side is the same muscle in a different market. At Sensata I owned GTM for a new sensing product line across North America and Europe with no existing playbook, building positioning, pricing and channel from a cold start and landing $2M+ in first-year revenue. At Simon Vision Consulting I led a 5-consultant team that narrowed 170 facilities to a defensible SAM of 28 and presented the market-entry case directly to Safran's leadership, the same discipline of mapping a landscape before deciding who to approach that your demand vertical needs.

I would want fifteen minutes to walk through how I would map and approach the first set of institutions for whichever vertical you hand me, built around the same shape as the Bleeders and Leakers program: find the real supply, structure the first deal, then turn it into a number you can carry.
