PITCH DECK | OPENPRISE SR. PRODUCT MARKETING MANAGER

Openprise needs a product marketer who can turn an Ops and AI orchestration platform's capabilities into a narrative RevOps and MarketingOps buyers trust, then prove it with ROI tools and case studies. I have already built that exact system end to end, with a number on it each time.

A $2M+ GTM launch, a 50+-rep enablement system and RevOps/CRM fluency, on the same resume.

- **+30% win rate** from a sales-enablement system built for 50+ reps at Sensata
- **$2M+ first-year revenue** from an end-to-end GTM launch
- **22% CSAT lift** from 30+ structured buyer interviews
- **CRM/CPQ ownership** across Salesforce, HubSpot and Pardot
- **AI agents built on Claude** automating my own recurring analysis at Applied Materials

WHY THIS DECK EXISTS

The role is not "inherit a positioning deck." It is building the positioning, enablement and ROI-tooling system for buyers who live in dashboards, not slideware.

What that actually requires

Positioning for RevOps and MarketingOps buyer personas and core use cases, built on how they actually evaluate a platform, not written for a generic SaaS buyer.

Sales enablement that works: decks, one-pagers, ROI tools and training built once as a system Sales can reuse, not rebuilt per rep per deal.

Case studies and reference programs run jointly with Customer Success, because a technical buyer trusts a peer's result more than a slide.

What I have already run

At **Sensata**, I owned the go-to-market plan end to end for new sensing products sold to technical, operational buyers, positioning through launch, driving $2M+ first-year revenue.

At **Sensata** again, I built the training, decks and case studies that 50+ reps used on live launches, moving win rates 30%.

At **Pixis**, I kept enterprise case studies and reference materials current with Customer Success input, the same handoff this role is asking for.

> The through-line: every system I built started with a buyer who needed proof, not a pitch, and ended with a number Sales or Customer Success could point to.

THE MANDATE, MAPPED

What the posting asks for, and where the proof already sits.

What the role covers

> *"Define positioning for key buyer personas and core use cases, and turn platform capabilities into differentiated narratives."*

> *"Monitor competitors and equip sales with materials and training; create decks, one-pagers, ROI tools and sales training."*

> *"Develop case studies and reference programs with customer success."*

My proof

Sensata, positioning and narrative: turned platform capabilities into buyer-ready value for OEM and distributor personas, lifting conversion 15%.

Sensata, sales enablement: trained and armed 50+ reps with decks and case studies for live launches, moving win rates 30%, while tracking competitor moves across EMEA and the US.

Pixis, case studies with CS: kept enterprise case studies and reference materials current with Customer Success input, supporting a 20% improvement in sales performance.

RevOps and data fluency: CRM/CPQ ownership across Salesforce, HubSpot and Pardot, SQL and GA4 KPI frameworks, now automated with AI agents built on Claude at Applied Materials.

THE PROOF, IN DEPTH

Map the buyer, build the enablement system, then put a number on it.

Same pattern across two Sensata roles and Pixis: understand the buyer directly, ship the positioning or enablement asset, then measure whether it moved a number Sales or Customer Success was accountable for.

+30% Win Rate

Sales-Enablement System for 50+ Reps

Decks, training and case studies built from scratch for live sensing-product launches at Sensata.

$2M+ Revenue

End-to-End GTM, Zero to Launch

Positioning, pricing, channel and launch owned start to finish for new sensing products sold to technical buyers.

22% CSAT Lift

30+ Structured Buyer Interviews

Direct contact with OEMs and distributors that found the pain points a dashboard alone would have missed.

None of these was a positioning doc that sat in a folder. Each one closed the loop from narrative to a number the business was accountable for.

FIRST 30 DAYS

What the first month building Openprise's positioning and enablement system looks like.

WEEK 1

Map the buyer personas and competitive landscape

Build the first RevOps/MarketingOps buyer-persona map and competitor teardown directly with Sales and Customer Success, so the first positioning pass is built on how Openprise actually wins and loses, not a guess.

Why first: the same first move behind the positioning work that lifted conversion 15% at Sensata.

WEEK 2-3

Ship the first enablement and ROI-tooling system

Build the first battlecard, one-pager and ROI tool directly with Sales, versioned once as a reusable system instead of rebuilt per rep per deal.

Why now: the same build that moved Sensata's win rate 30% instead of a deck no rep opened twice.

WEEK 4

Stand up the case-study and insight loop with CS

Institute the direct-contact discipline behind 30+ structured interviews at Sensata, paired with a joint reference-program cadence with Customer Success, then automate the reporting step with an AI agent so insight ships every cycle.

Why this fast: the same habit that keeps my own reporting moving at Applied Materials today, not a plan for someday.

CLOSE

You are hiring someone to turn an Ops and AI orchestration platform into a narrative RevOps and MarketingOps buyers trust, then prove it with ROI tools and case studies. I have already built that system twice, with a number on each one.

The enablement half: **+30% win rate** from a training, deck and case-study system built from scratch for 50+ reps at Sensata, feeding a $2M+ GTM launch end to end.

The buyer-insight half: **22% CSAT lift** from 30+ structured interviews with OEMs and distributors, plus hands-on CRM/CPQ fluency across Salesforce, HubSpot and Pardot. At Applied Materials I now automate my own recurring competitive analysis with agents built on Claude, because rebuilding the same report every cycle is time that should go into the next launch.
