Hiring Team, Sigma Computing

Your posting asks for someone who can take a fast-moving AI capability and turn it into a market message a rep can use in a live deal by Friday. At Sensata, that was the job: I turned dense sensor specs into positioning and enablement for OEM engineers who could tell a real claim from a spec sheet, and the launch it supported drove \$2M+ in first-year revenue and a 15% lift in conversion.

I built the sales enablement that made that story stick: decks, case studies and competitive one-pagers for 50+ reps, and I ran 30+ structured interviews with OEMs and distributors to pressure-test messaging before it shipped. That is the same discipline a battlecard or an objection handler needs, built from real win/loss data and real conversations, not a guess about what a technical buyer wants to hear.

At Applied Materials today, I size a fast-moving semiconductor market from Sales, Engineering and Accounts input, and I automate the repetitive parts of that competitive analysis with AI agents built on Claude instead of rebuilding the same report every cycle. That is the same fluency I would bring to writing about Sigma's AI features: someone who uses the tools daily and can tell the difference between what is genuinely new and what is repackaged.

What I would bring to Sigma is the full loop already run once: positioning built from real technical depth, tested against the buyer, armed for the sellers, and tied to a revenue number. Proof trail at adhi-product-ai.vercel.app/ref/sigma-computing.
