Hiring Team, DoorDash

Your posting asks for someone who is proficient in SQL and Excel and comfortable building their own tools and automations, so here is the proof point: at Sensata I built the FY2026 Bleeders and Leakers dashboard in Power BI from scratch, tracking 1,200 pricing opportunities against a \$627M target across 3 regions, 4 product families and 20 product lines, and used it to surface \$433M in margin gaps for leadership to prioritize by region and product line.

The strategy-and-ops shape of this role is also one I have run before. At Applied Materials I size the semiconductor market by pulling Sales, Engineering and Accounts input into one shared view instead of letting each function run its own number, then turn that into forecasting models leadership can act on. At Sensata I ran competitor and customer analysis across EMEA and the US, finding revenue opportunities in purchasing patterns and competitor market share that fed directly into pricing and go-to-market decisions.

I also like building the operating system underneath the strategy, not just the recommendation. I founded PriceKeel this year and set up its CRM, forecasting and deal-approval process from zero, the same instinct that made the Bleeders and Leakers dashboard useful: a tool is only as good as whether someone can act on it the next morning.

I would welcome the chance to talk about how International Sales Strategy and Operations is approaching its next region or workflow. More of the work is at adhithyabhaskar.vercel.app/ref/doordash.
