Hiring Team, Ema

PriceKeel did not have a CRM, a CPQ, a forecast process or a deal-approval workflow until I built them. I am the founder, so I designed those systems from a blank page and I still run them today: CRM and CPQ configuration, forecast and pipeline reviews, and a deal-approval workflow with an audit trail Finance can act on. That is close to a literal description of what this role is asking for: the first dedicated hire building the RevOps function, not inheriting one someone else already shaped.

I have also run that muscle at scale, inside someone else's org. At Sensata I built the FY2026 Bleeders and Leakers Power BI dashboard, tracking 1,200 pricing opportunities against a \$627M target with pipeline funnel, win rate and stage distribution by salesperson and product line. That dashboard is where I recovered \$700K+ in margin in two quarters and raised distributor and channel-partner margins from 53% to 61%. None of that visibility existed before the dashboard did; forecasting and pipeline management only work once someone builds the source of truth first.

The systems side of RevOps is not new to me either. At Plug Power I automated the Mar-Tech stack (Salesforce, Adobe Analytics, GA, Google Tag Manager) end to end for closed-loop reporting, and I built the GTM and analytics stack behind SwipeHire, an AI job-matching platform I shipped zero to one on the OpenAI API. I bring that same instinct to Applied Materials today, where I automate repetitive revenue analysis with Claude agents instead of running it by hand every quarter.

The build behind PriceKeel's RevOps stack, the Sensata dashboard and the systems work at Plug Power is at adhithyabhaskar.vercel.app/ref/ema if you want the detail behind any of it.
