PITCH DECK | PYLON PRODUCT MANAGER

Owning a product area on an agentic support platform means deciding, every week, what the agent handles alone and what still needs a human read. I have been running that exact judgment call, just on a different product.

End-to-end product ownership, evidence-first roadmapping and AI-agent judgment from someone who has shipped two products from a blank page.

- **50+ users** on SwipeHire, shipped zero-to-one (PRD to launch) solo
- **100+ feature backlog** owned end to end at Sensata, time-to-market -20%
- **30+ interviews** driving CSAT +22% before any roadmap call
- **8+ A/B tests, 12+ interviews** shaping SwipeHire's onboarding flow
- **Claude AI agents** in daily use automating repetitive analysis

WHY THIS DECK EXISTS

An agentic support product lives or dies on one judgment call: what the agent handles alone, and what still needs a human read, repeated every week as trust shifts.

What losing that discipline runs into

A product area without that boundary does not fail loudly. It fails as an agent that over-automates and erodes customer trust, or under-automates and ships a dashboard nobody asked for.

Spanning PDE to GTM means Product, Engineering, Sales and CS all read that boundary differently unless one person owns the definition and defends it with evidence.

The fix is not a stricter policy. It is someone who treats discovery, scoping and the automate-versus-verify call as one job, not three separate handoffs.

What I have already run

At **Sensata**, I owned a 100+ feature backlog end to end with engineering in Agile across 3 regions, the same full-funnel ownership "own an entire product area" is asking for.

At **SwipeHire**, I wrote the PRD, scoped the MVP and shipped AI-driven matching alone, then used 12+ interviews and 8+ A/B tests to decide what the AI should decide versus what the user still needed to see.

Both mean I have made that automate-versus-verify call myself, not just reviewed someone else's.

> **A Product Manager who owns a product area end to end, lives the customer persona, and starts with evidence is describing exactly this loop: decide what the agent can be trusted with, defend the call with data, and move the line as trust grows.**

THE REQ, MAPPED

What the Product Manager opening asks for, and where the proof already sits.

What the role covers

> *Own an entire product area end to end, from initial discovery and problem definition through scoping, execution, launch, adoption, and iteration.*

> *Live and breathe one customer persona. Be the subject matter expert for that persona.*

> *Span PDE to GTM, partnering with PMM, sales, and customer teams on positioning, launches, enablement.*

> *Start with evidence. Talk to customers regularly and use calls, tickets, feature requests, product data.*

My Proof

End-to-end ownership: wrote the PRD, scoped the MVP and shipped SwipeHire zero-to-one to 50+ users; owned Sensata's 100+ feature backlog and roadmap across 3 regions.

Persona depth: ran 30+ structured OEM and distributor interviews at Sensata and 12+ job-seeker interviews on SwipeHire before trusting a roadmap call.

PDE to GTM: owned positioning, pricing, channel and launch for new sensing products, driving $2M+ first-year revenue, plus sales enablement for 50+ reps.

Evidence-first: 8+ A/B tests and SQL/GA4 cohort data on 50K+ devices, not instinct, decided what shipped and what didn't.

THE PROOF, IN DEPTH

SwipeHire: own the product area, decide what the AI handles, verify with real users.

Built solo from a blank page: wrote the PRD, scoped the MVP, and shipped AI-driven candidate-job matching and auto-tailored resumes on Python, OpenAI's API and React, then ran the GTM and analytics stack myself.

50+

Early Users Onboarded

Shipped zero-to-one with no team, the same full-stack ownership this role asks for on a single product area.

12+

User Interviews

Lived the job-seeker persona before writing a line of the matching logic, the "start with evidence" habit in practice.

+25%

Activation Lift

8+ A/B tests on onboarding decided what the AI auto-filled versus what the user still needed to confirm.

At Sensata that same discipline scaled to a 100+ feature backlog across 3 regions: own the roadmap, verify with the persona, ship, and keep the loop running every quarter, not just at launch.

FIRST 30 DAYS

What the first month owning a product area at Pylon looks like.

WEEK 1

Learn the persona and the current automate/verify line

Sit with Support, Engineering and CS to live the target customer persona's workflow, read the tickets and feature requests already on file, and map where the agent currently hands off to a human.

Why first: the same instinct that had me run 12+ interviews before touching SwipeHire's matching logic.

WEEK 2-3

Own one scoping and launch cycle

Take one piece of the product area from problem definition through a shipped change: scope it with Engineering, test the automate-versus-verify call with real usage data, and bring a point of view to defend in review.

Why now: the same end-to-end habit that shipped SwipeHire's MVP without a team behind it.

WEEK 4

Close the GTM loop and defend the next iteration

Partner with PMM, sales and customer teams on positioning and enablement for what shipped, then bring the adoption data back to argue for (or against) the next move.

Why this fast: a product area only earns trust if the loop keeps running past the first ship, not just at launch.

CLOSE

You are hiring someone to own a product area end to end and decide what the agent can be trusted with. I have already run that loop twice, on two different products.

The core proof is SwipeHire: a zero-to-one build with **50+ early users**, a PRD and MVP I scoped and shipped alone, and **12+ interviews plus 8+ A/B tests** deciding what the product automated versus what the user still confirmed.

What scales that proof is Sensata, where the same discipline ran across a **100+ feature backlog** with engineering in Agile across 3 regions, cutting time-to-market 20%. Owning a persona, starting with evidence, and shipping fast is not new territory for me, it is the job I already do.
