Hiring Team, [Confidential]

At Pixis, I ran growth for an 8-client portfolio on budgets of $15K-$90K per client per month, and the work your posting describes is the same job: own CAC efficiency, run the funnel end to end, and make lifecycle and retention the thing that protects the acquisition spend rather than an afterthought. I cut client churn 50% through proactive account strategy and vertical retention playbooks, delivered 3x ROAS in one month for a fashion brand through full-funnel restructuring (shopping feed cleanup, smart bidding, creative refresh, lookalike expansion), and used Amplitude on 30+ campaigns to lift ROAS 40%. I also ran iOS app user acquisition on AppsFlyer and Adjust and PPC in non-English markets, so your tool stack is not new to me.

Before Pixis, at GenY Medium I rebuilt Google Merchant Center and Meta catalog feeds to deliver 16x ROAS for D2C brands, and at Plug Power I owned $100K/month in paid budgets across Google, Microsoft, Meta and LinkedIn, cutting CPA 25% through bid optimization and A/B testing and cost per lead 50% by automating the lead flow. That is the acquisition side; on the content and SEO side, I closed keyword-strategy gaps that lifted organic visibility 35% and ran the database and site audits that back content-led growth rather than guessing at it.

I carry the operator side of a Head of Growth seat too: P&L and revenue targets at Applied Materials and Sensata, hiring and managing the teams that run the budget, and an operating cadence of OKRs on weekly and quarterly business reviews. I now run PriceKeel, my own company, where I set up the CRM, CPQ and pipeline reviews myself and am raising its first round, so budget ownership and investor-grade reporting are not new either. I automate the repetitive parts of that reporting with Claude AI agents, which frees the week for the channel and funnel decisions that actually move CAC and ROAS.

What I would bring on day one is a full-funnel read: I can run the paid and lifecycle experiments and also fix the unit economics underneath them when a channel stops scaling efficiently. Proof trail at adhi-growth-ai.vercel.app/ref/confidential-peak-xv.
