Hiring Team, Glean

At Sensata I owned the roadmap and a 100+ feature backlog for a connected-sensor product line, running Agile with engineering across three regions to ship releases 25% faster and cut time-to-market 20%. The KPI frameworks I built in SQL and GA4 segmented 50,000+ connected devices into high-intent adoption cohorts, the same signal work your Mountain View req describes as turning first-touch curiosity into durable, expanding usage.

Zero-to-one is not theoretical for me either. I wrote the PRD and scoped the MVP for SwipeHire, an AI job-matching platform, then ran 8+ activation experiments on its onboarding flow that lifted first-session activation 25% among its first 50+ users. That is the activation-loop work your posting is asking someone to own: designing the experiment, not just shipping the feature and hoping it sticks.

The experimentation habit carries over from paid media too. At Plug Power I tested bids and creative across 15+ experiments on Google, Microsoft and Meta that cut CPA 25%, and at Sensata I partnered with engineering and data teams on that same 100+ item backlog to prioritize by signal instead of opinion. At Applied Materials I now automate the repetitive side of my own forecasting with AI agents built on Claude, so I already work inside the kind of AI tooling Glean's own product is built on.

Glean's users are not people who came looking for a growth email, they came looking for an answer, which is exactly the kind of off-surface, high-trust growth problem I want to work on next. Proof trail at [adhi-growth-ai.vercel.app/ref/glean](https://adhi-growth-ai.vercel.app/ref/glean).
