Hiring Team, Meta

At Sensata, I benchmarked 10+ competitors across multiple data sources to realign pricing, driving +8% market share, and built the FY2026 Bleeders and Leakers dashboard that surfaced $433M in margin gaps across 3 regions and 20 product lines. Both started as imperfect, scattered signal and ended as one number leadership could act on, the same kind of triangulation problem your Competitive Intelligence org runs on 3P datasets.

The sourcing side of that work matters as much as the modeling. I ran 30+ stakeholder interviews with OEMs and distributors at Sensata to find adoption blockers no dataset would show on its own, and led a 5-consultant team at Simon Vision Consulting that triangulated data from 150+ facilities into a SAM of 28 across 4 verticals for Safran, validating each data point against the next before it went into a leadership deck. That is the discipline I would bring to pressure-testing 3P signal for data quality and reliability before it drives a market-strategy call.

I already run the AI-powered half of this work day to day. At Applied Materials I built Claude agents that automate the repetitive parts of my market analysis, the same kind of prompting and orchestration this role asks for to clean datasets, build visualizations and move faster between imperfect signal and a usable answer.

More of the triangulation work, dashboards included, is at adhithyabhaskar.vercel.app/ref/meta. I would welcome the chance to talk through how it maps to what your Competitive Intelligence team is building right now.
