SUMMARY

Zero-to-one product builder who turns messy, undefined problems into shipped systems, not just plans. Built the rule-based flagging model behind Sensata's Bleeders and Leakers margin program across 1,200 pricing opportunities, catching where deals were bleeding money and recovering \$700K+ in two quarters. Owned the roadmap and a 100+ feature backlog for sensor products end to end, from 30+ customer interviews to a release cycle 25% faster. Builds AI agents on Claude to decide which repetitive judgment calls a machine should make and which stay with a person, and works comfortably in SQL and Python to get there.
