PITCH DECK | ZENDESK ABX & INDUSTRY MARKETING MANAGER

Zendesk needs one person who can run the full ABX loop: the industry play, the campaign kit, the account-tier paid media and the dashboard that proves it moved pipeline. I have already run every piece of that loop, just not yet under one title.

An industry GTM launch, an account-tier paid media book, and an engagement-signal pipeline dashboard, on the same resume.

- **$2M+ first-year revenue** from an industry-specific GTM play at Sensata
- **+30% win rate** from a campaign kit built for 50+ reps
- **8-client paid media book** run at once, $15K-$90K per account per month
- **1,200-opportunity pipeline dashboard** across 3 regions in Power BI
- **AI agents built on Claude** automating my own campaign analysis today

WHY THIS DECK EXISTS

The role is not one campaign type. It is an operating model: 1:1, 1:few and scaled programs, each needing its own play, kit and media plan, all tied back to one pipeline number.

What that actually requires

An industry-specific play built once, positioning, pricing, channel and launch together, not assembled fresh per account tier.

Paid media run across several account books at the same time, not one campaign waiting for the last one to close.

A pipeline-impact dashboard built BEFORE the quarterly review, so the ABX motion has a number before anyone asks for one.

What I have already run

At **Sensata**, I built the industry play for new sensing products, positioning through launch, as one motion, driving $2M+ first-year revenue.

At **Plug Power and Pixis**, I ran paid media across an 8-client and multi-business-unit book at once, $15K-$90K per account per month.

At **Sensata** again, I built the FY2026 pipeline dashboard before leadership asked, 1,200 opportunities, 3 regions, funnel stage and win rate.

> **The through-line: every piece of the ABX loop, industry play, account-tier media, pipeline dashboard, already has my name on it. It is the "under one title" part that is new.**

THE MANDATE, MAPPED

What the posting asks for, and where the proof already sits.

What the role covers

> *"Build the ABX operating model across 1:1, 1:few, and scaled programs; develop global industry plays, campaign kits, sales enablement."*

> *"Lead paid media strategy for priority-account and cohort campaigns."*

> *"Measure pipeline impact and build AI-enabled campaign workflows."*

My proof

Sensata, the industry play and kit: a sensing-product GTM launch (positioning, pricing, channel, launch) handed to 50+ reps as battlecards and case studies, moving win rate 30%.

Plug Power and Pixis, account-tier paid media: Paid Search/Social across Google, Microsoft, Meta and LinkedIn for priority-account campaigns, plus an 8-client paid media book, $15K-$90K per account per month.

Sensata, pipeline impact: a Power BI dashboard tracking 1,200 opportunities against a $627M target across 3 regions, with funnel stage and win rate by region.

Applied Materials, AI-enabled workflows: automating recurring campaign and market analysis with AI agents built on Claude, through responsible AI use, today.

THE PROOF, IN DEPTH

Build the play, run the account-tier media, then put a pipeline number on it.

Same pattern across three companies: build the industry-specific play or media book first, then measure whether it moved a pipeline or revenue number leadership was accountable for.

$2M+ Revenue

Industry-Specific GTM Play, Zero to Launch

Positioning, pricing, channel and launch owned end to end for new sensing products across North America and Europe.

+30% Win Rate

Campaign Kit for 50+ Reps

Battlecards, decks and case studies built from scratch, armed to a live sales team mid-launch.

1,200 Opportunities

Pipeline-Impact Dashboard, 3 Regions

Power BI build tracking a $627M target with funnel stage, win rate and regional scorecards for leadership.

None of these sat in a slide deck waiting for a quarterly review. Each one closed the loop from campaign to a number the business already had its eyes on.

FIRST 30 DAYS

What the first month building Zendesk's ABX operating model looks like.

WEEK 1

Map the account tiers and the first industry play

Pair with Sales and Operations to segment the priority-account list into 1:1, 1:few and scaled tiers, then draft the first industry-specific play (positioning, pricing, channel, launch) for the highest-priority vertical.

Why first: the same first move behind the Sensata sensing-product play, build the segmentation before the campaign.

WEEK 2-3

Ship the first campaign kit and media plan

Build the first campaign kit (battlecards, one-pagers, case studies) with Sales, and stand up the paid media plan for that account tier across the ABM advertising platforms already in place.

Why now: the same build that moved Sensata's win rate 30%, paired with the account-tier media book run at Plug Power and Pixis.

WEEK 4

Stand up the pipeline-impact dashboard

Build the first engagement-signal and pipeline dashboard tying the new play and media spend to pipeline stage and win rate, then automate the recurring reporting step with the first AI agent.

Why this fast: the same FY2026 dashboard discipline from Sensata, paired with the AI-agent habit already running at Applied Materials.

CLOSE

You are hiring someone to run the full ABX loop end to end. I have already run every piece of it, industry play, campaign kit, account-tier media, pipeline dashboard, just not yet under one title.

The play-and-kit half: **$2M+ first-year revenue** from an industry-specific GTM launch at Sensata, handed to 50+ reps as a campaign kit that lifted win rate 30%.

The media-and-measurement half: an **8-client paid media book** run at once across Plug Power and Pixis, plus a **1,200-opportunity pipeline dashboard** built in Power BI across 3 regions. At Applied Materials I now automate my own recurring campaign and market analysis with AI agents built on Claude, through responsible AI use, because rebuilding the same report every cycle is time that should go into the next industry play.
