Hiring Team, Socure

Your posting says the work starts with interviewing engineers and technical leaders, not with a content calendar template. That is exactly how I built the positioning for a new Sensata sensing-product launch: 30+ structured interviews with OEMs and distributors before I wrote a line of copy, the same interviews that surfaced the pain points that became the launch's actual pitch and drove $2M+ in first-year revenue.

Translating hard technical work into a story a skeptical audience will read is the same muscle behind the FY2026 Bleeders and Leakers Power BI dashboard I built at Sensata: 1,200 pricing opportunities scored against a $627M target, distilled into the numbers and narrative that got leadership to act on $433M in margin gaps. Getting content in front of the right audience is the other half of the job. At Plug Power I closed keyword-strategy gaps and built SEO partnerships that raised organic visibility 35%, and at GenY Medium I ran the backlink, keyword and internal-linking audits that kept organic content finding its readers.

Editorial standards and cross-functional partnership are where I'd want to spend the first month. At Sensata I built sales enablement content with Engineering and Sales for 50+ reps and kept every technical claim accurate before it reached a rep's hands, protecting the same editorial bar your posting asks for across channels. At Applied Materials I already automate the recurring research and drafting work with AI agents built on Claude, so the AI-assisted workflow your posting describes is how I work day to day, not a new habit to build.

I'd welcome the chance to talk through how those interviews and that dashboard map onto the engineering stories Socure needs told next. Proof trail at adhi-product-ai.vercel.app/ref/socure.
