Hiring Team, Datadog

Your posting asks for someone who can get deep enough into Datadog's licensing and pricing models to structure a quote, then stay on the deal after it closes if a customer satisfaction issue comes up. I have done both halves of that at Sensata: led the Bleeders and Leakers program, negotiating directly with customers against competitive gaps and each one's own willingness to pay, which recovered \$700K plus in margin in two quarters, and separately carried an 8-client book at Pixis where resolving post-launch account issues was the job, cutting churn 50 percent through proactive account strategy rather than letting a deal unravel after the fact.

The quoting and internal-controls side of this role is not new either. At Sensata I partnered with senior executives, Legal and Finance on AP26 revenue models and multimillion-dollar customer quotes, then wrote the new discount logic from a distributor-margin repricing project (53 percent to 61 percent) into the program's own internal controls so Finance could audit it without asking me to explain it first. I have since built that same discipline into a product: PriceKeel, the company I founded, reads a live discount exception inside the deal platform, and I set up and run its CRM, CPQ configuration and deal-approval workflow myself, which is the closest thing to living inside a Deal Desk's actual workflow short of holding the title.

Your posting also names the cross-functional list this seat works across: Sales Operations, Billing, Contracts, Legal, Order Management, Revenue, Finance and Product Management. That list matches how the Sensata quotes actually got built, one stakeholder group at a time, under a hard deadline and often a demanding customer on the other end of the call. Strong MS Excel and PowerPoint work came with it, since every pricing exception needed a model and every executive review needed a deck that held up.

Right now, as Strategic Marketing III at Applied Materials, I develop pricing-model expertise for a market moving fast enough that I automate the repetitive analysis with Claude AI agents, then apply that judgment wherever Sales needs a pricing answer. I would rather bring someone who has already negotiated the hard quote and then fixed what went wrong after it closed, not someone meeting a customer escalation for the first time. Proof trail at adhi-pricing-ai.vercel.app/ref/datadog.
