Hiring Team, Sela AI

At Sensata I took an ambiguous pricing problem, the Bleeders and Leakers program, from scattered spreadsheets to a negotiated outcome that recovered \$700K in margin in two quarters and moved distributor margins from 53% to 61%. That is the first half of the role you posted: owning a commercial function outright, not advising on it from the side.

The second half, building the operating and reporting infrastructure that does not exist yet, is what I run today as founder of PriceKeel. I set up the CRM, CPQ, forecast and pipeline reviews, deal approvals, and the audit trail Finance uses to trust a pricing call, all before there was anyone else to hand the ambiguous parts to. I also lead the first round raise directly with investors while running pilots, so board materials and investor updates are a weekly habit, not a new skill I am picking up for this job.

The pricing half of your commercial engine is close to work I already do. At Applied Materials I sit between Sales, Engineering and Accounts to turn scattered input into one pricing view for leadership. At Sensata I shaped AP26 revenue models and multimillion dollar customer quotes directly with senior executives, the same negotiation and structure you need as Sela moves upmarket. I automate the recurring analysis behind both with Claude agents, which should make the technical half of this role comfortable territory rather than a stretch.
