Hiring Team, Hightouch

At Pixis I ran retail media and multi-channel paid campaigns, Amazon Ads, Criteo, Meta, Google, LinkedIn, across an 8-client portfolio, with iOS app paid UA layered on top through Appsflyer and Adjust. Every one of those channels comes down to the same move: take a segment built from intent data and turn it into a live, addressable audience on someone else's ad platform. That is the exact motion Ad Studio packages into a product, and it is the motion I have been running by hand across a client book for a year and a half.

At Plug Power I owned \$100K/month in paid budgets across Google, Microsoft, Meta and LinkedIn and rebuilt closed-loop attribution from scratch, cutting CPA 25% while holding volume. At Sensata I built KPI frameworks in SQL and GA4 across 50,000+ connected devices, separating the accounts worth chasing from the ones drifting toward churn, work that lifted qualified leads 35% on new product launches. A warehouse-native activation layer would have made both of those jobs faster; Hightouch is selling the tool I was missing.

At Applied Materials I automate the repetitive side of my own forecasting and market-sizing work with AI agents built on Claude, because rebuilding the same pivot table every cycle wastes a decision-maker's time. Turning "we know this is the right audience" into "the audience is live on the platform" is the same instinct at product scale, and it is the part of growth work I find genuinely interesting. Cutting client churn 50% at Pixis through proactive account strategy also means I can own a book of advertiser relationships, not just the media plan sitting behind them.

I would like to bring the retail-media and multi-channel paid ownership from Pixis and Plug Power to Ad Studio, and the segmentation habit from Sensata to whatever audience Hightouch customers build next. Proof trail at adhi-growth-ai.vercel.app/ref/hightouch.
