

PITCH DECK | AFFIRM SENIOR PRODUCT MANAGER, CREDIT & PRICING

Every new pricing or credit feature shipped into the merchant portfolio needs an answer to one question before it ships: how will we know it worked. I have already built that answer twice.

Pricing and credit product strategy built by someone who has recovered the margin, not just modeled it.

\$700K+ margin recovered in 2 quarters, Sensata Bleeders and Leakers program

1,200 pricing opportunities segmented across 3 regions against a \$627M target

53% to 61% distributor margin lift via repriced deal structures that held

PriceKeel - founder shipping a live discount-guardrail engine and Finance audit trail

Claude AI agents automate recurring pricing analysis today

The risk in merchant financing pricing is not a bad feature. It is **a feature nobody can prove worked, or defend to Finance six months later.**

What a credit and pricing roadmap runs into

Credit, pricing, commercial, design and engineering all touch the same merchant financing offering, and a pricing change that looks right in isolation can quietly break a credit assumption another team is relying on.

Without a shared way to segment impact and document the decision, "we shipped a new pricing feature" and "we know it worked" end up being two different claims, and only one of them is provable later.

The fix is not another dashboard nobody trusts. It is a segmentation model tied to a real target, plus an audit trail that lets Finance and Credit sign off on the decision before and after it ships.

What I have already run, at smaller scale

At **Sensata**, I built the Bleeders and Leakers Power BI dashboard: 1,200 pricing opportunities segmented by region and product line against a \$627M target, with one shared definition of what a "gap" meant.

I did not stop at the dashboard. I **redesigned the deal structures** underneath the worst gaps, which is why the 53% to 61% distributor margin lift held past the first quarter.

I run that same loop today at **PriceKeel**: a guardrail engine that reads a live discount exception and an audit trail Finance can point to, because a pricing feature only counts once someone can prove it worked.

Defining product strategy, creating new features for merchant financing, analyzing feature impact and partnering across credit, pricing, commercial, design and engineering are all describing this exact loop: ship the feature, measure it against a real target, and keep the proof.

What the Credit & Pricing opening asks for, and where the proof sits.

What the role covers

- "Creating new products and features for our merchant financing offerings and analyzing their impact."*
- "You have a data-driven learning style and use quantitative information to make decisions."*
- "Experience shipping simple, elegant user-facing products with measurable impact."*

My Proof

- Bleeders and Leakers program at Sensata:** shipped the pricing fix, then measured it: \$700K+ in margin recovered in 2 quarters, distributor margins from 53% to 61%, both verified after the fact, not just modeled.
- PriceKeel guardrail engine:** a live pricing feature that reads a discount exception and recommends a guardrail learned from a company's own deal history, with an audit trail behind every call.
- Quantitative decision-making:** SQL, Power BI and regression to segment 1,200 opportunities against a \$627M target and surface exactly where \$433M in margin was leaking.
- AI tools as a habit, not a pilot:** automate recurring pricing analysis with Claude AI agents today at Applied Materials, the same instinct a fast-moving credit and pricing team runs on.

Bleeders and Leakers: one segmentation model, one fix per gap, a result that got verified.

Built as a BU-wide Power BI system covering 1,200 pricing opportunities against a \$627M target across 3 regions, 4 product families and 20 product lines, with a pipeline funnel, regional scorecards and win-rate view: the same feature-impact-analysis discipline a credit and pricing roadmap runs on.

\$433M

Margin Gaps Surfaced

The segmentation model's job: rank every opportunity on one consistent definition so leadership could prioritize by salesperson and product line instead of chasing anecdotes.

\$700K+

Margin Recovered in 2 Quarters

Closed through negotiated fixes built on competitive gaps and documented customer willingness to pay, then verified against the original target.

53% to 61%

Distributor Margin Lift

Redesigned the deal structure itself and routed it through Finance and Sales sign-off, so the gain outlived the first repricing pass.

The same BU carried P&L and revenue targets and ran multimillion-dollar customer quotes alongside senior executives, where pricing, Finance and Sales all had to agree on the same numbers before a deal moved. The common thread: ship the feature, then go back and prove it worked.

What the first month on Affirm's Credit & Pricing team looks like.

WEEK 1

Map the merchant financing pricing surface

Pull the current pricing and credit features across the merchant portfolio and the metrics each one is measured against today, then find where credit, pricing and commercial teams are using the same term to mean different things.

Why first: the disagreement is usually visible in the data before anyone names it. Same move that started the Bleeders and Leakers program.

WEEK 2-3

Ship the first measured feature

Pick the merchant financing feature with the clearest impact case, define the target and the segmentation up front, and ship it with design and engineering with the measurement plan built in rather than bolted on after launch.

Why now: ranking against one real target before shipping, then verifying after, is what made the 53% to 61% distributor gain stick.

WEEK 4

Document the decision trail

Turn the Week 1 findings and the Week 2-3 result into a standard for how credit, pricing and commercial sign off on a feature before and after it ships, and share it back with the cross-functional group.

Why this fast: a measured result matters less if nobody can find the reasoning behind it later. Repeatability is the actual ask behind "analyzing feature impact."

CLOSE

You are hiring someone to ship pricing and credit features into the merchant portfolio and prove they worked. I have already run that loop, twice.

The core proof is Sensata: **\$700K+ in margin recovered in 2 quarters**, distributor margins lifted **from 53% to 61%**, and a BU-wide segmentation model that gave Sales, Finance and leadership one shared view of 1,200 opportunities against a \$627M target.

What is harder to find is someone who also builds that discipline into the product itself. As founder of **PriceKeel**, I ship a live discount-guardrail feature with the audit trail built in from day one, which is the habit this role is really asking for.
