

PITCH DECK | COINBASE SENIOR PERFORMANCE MARKETING MANAGER, GLOBAL PAID SOCIAL & MOBILE UA

Paid social and mobile UA usually sit in separate budgets. I have already run them as one P&L, with the same measurement stack this role names.

Paid social, mobile UA and retail media, held to one target, with Appsflyer and Adjust measurement underneath.

Appsflyer + Adjust - ran iOS app UA and mobile measurement at Pixis

8 clients, \$15K-\$90K/mo each - paid social, mobile UA and retail media, one P&L

3x ROAS in one month via full-funnel restructuring

40% ROAS lift from Amplitude/Tableau-driven testing across 30+ campaigns

-25% CPA on \$100K/month paid budgets at Plug Power

Paid social and mobile UA are one acquisition motion, not two. Measured wrong, they compete for budget instead of compounding.

What running them apart runs into

A user acquired on Meta and a user acquired through mobile display look identical in a blended CAC number, but they convert differently and need different measurement, SKAN for one, MMP event data for the other.

Without one shared incrementality and mobile-measurement framework, paid social and mobile UA end up optimizing against each other's attribution instead of the same business outcome.

The fix is not more spend. It is a testing agenda that treats creative, audience and bidding tests as one funnel, with a measurement partner stack that survives privacy changes.

What I have already run, at smaller scale

At **Pixis**, I ran iOS app user acquisition on Appsflyer and Adjust while also running paid social and retail media (Amazon Ads, Criteo) for the same 8-client, \$15K-\$90K/month portfolio, one measurement view across channels.

I used **Amplitude and Tableau** across 30+ campaigns to connect channel-level testing to downstream ROAS, lifting it 40%, the same testing-to-outcome loop this role runs on paid social and mobile UA.

At **Plug Power**, I ran Paid Search and Paid Social across Google, Microsoft, Meta and LinkedIn under one CPA target, cutting it 25% through bid optimization and structured A/B testing.

A Performance Marketing Manager who owns paid social and mobile UA end to end, runs a rigorous testing agenda, and partners with Data Science on incrementality and mobile measurement, is describing this exact loop: one funnel, one measurement stack, tested constantly.

What the Performance Marketing Manager opening asks for, and where the proof sits.

What the role covers

"Own end-to-end global strategy and execution across paid social (Meta, TikTok, Snap, Reddit) and mobile user acquisition... to hit aggressive new user acquisition and efficiency targets."

"Deep experience with mobile measurement and privacy-aware execution, including SKAN, mobile measurement partners (AppsFlyer, Adjust, Branch), event strategy, and incrementality testing."

"B2C experience required; fintech, crypto, or high-consideration consumer financial products strongly preferred."

My Proof

Paid social and mobile UA, owned together: ran iOS app UA on Appsflyer and Adjust plus paid social and retail media for the same client portfolio at Pixis, not two disconnected budgets.

Mobile measurement partners, by name: Appsflyer and Adjust are already my day-to-day tools, not a line item I would need to ramp on.

Testing and learning agenda: 15+ A/B tests at Plug Power and 30+ campaigns analyzed via Amplitude/Tableau at Pixis, both tied to a hard efficiency target.

AI-forward execution: automate recurring reporting with Claude AI agents at Applied Materials today, the responsible-AI habit this posting names directly.

One P&L, three channels: paid social, mobile UA and retail media, held to one target.

At Pixis, an 8-person team ran 8 client accounts at \$15K-\$90K per client per month, with paid social, iOS app UA (Appsflyer, Adjust) and retail media (Amazon Ads, Criteo) all reporting to the same P&L, across international, non-English markets.

3x ROAS

In One Month, Fashion Brand

Full-funnel restructuring: shopping feed cleanup, smart bidding and creative refresh run as one motion, not three separate fixes.

40%

ROAS Lift via Amplitude/Tableau

Analyzed user behavior across 30+ campaigns to find which channel-level tests actually moved the outcome that mattered.

50%

Client Churn Cut

Proactive account strategy and vertical playbooks, the same discipline that keeps a growth budget efficient past the first good month.

At Plug Power that same instinct ran on paid search and paid social: bid optimization and structured A/B testing cut CPA 25%, while automating the Mar-Tech stack (Salesforce, Adobe Analytics, GA, GTM) tied every dollar of spend back to pipeline stage.

What the first month on Coinbase's Growth Marketing team looks like.

WEEK 1

Map the measurement stack

Sit with Data Science and Analytics to walk the current SKAN, MMP and incrementality setup across paid social and mobile UA, and identify where attribution disagrees between channels.

Why first: the same cross-channel measurement view I ran across Appsflyer, Adjust and retail media at Pixis before touching a single budget.

WEEK 2-3

Ship one testing playbook

Run a structured creative or audience test across one paid social channel and mobile UA in parallel, then turn the result into a scaled playbook Data Science can validate with an incrementality read.

Why now: the same test-then-scale loop that took a fashion brand to 3x ROAS in one month.

WEEK 4

Build the standing dashboard

Ship a performance dashboard for paid social and mobile UA spend that Product Marketing, Creative and regional teams can all read the same way, so the next test starts from shared numbers.

Why this fast: a dashboard only earns trust if it exists before the next budget conversation, not after.

CLOSE

You are hiring someone to run paid social and mobile UA as one motion. I have already run three channels on one P&L, with the same measurement partners.

The core proof is Pixis: [iOS app UA on Appsflyer and Adjust](#), paid social and retail media held to one P&L across an 8-client, 8-person-team portfolio, with [3x ROAS in one month](#) and a [40% ROAS lift](#) from Amplitude/Tableau-driven testing.

What is harder to find is someone who already speaks the exact measurement language this role runs on, SKAN, Appsflyer, Adjust, incrementality, not someone learning it from the job description. [That stack is already my day-to-day tooling](#), so the ramp this role would otherwise need does not apply here.
