Hiring Team, Fivetran

Your posting asks for someone who can restore dedicated capacity for pricing and order operations testing and quote-to-cash release validation, work that gets skipped when a team is stretched thin and then costs everyone a broken booking three weeks later. I have spent the last year building exactly that kind of validation discipline for my own company, PriceKeel, and the two years before that inside a \$627M pricing program at Sensata where nothing shipped without a documented, testable trail.

At PriceKeel I set up the CRM, CPQ and quote-to-cash workflow from deal approval through order documentation myself, then built the testing and audit trail that lets Finance review every pricing and order change before it goes live. That is the same operational-readiness work your team runs across signature packets, bookings and marketplace offers, just built from the ground up instead of maintained.

At Sensata I recovered \$700K+ in margin in two quarters leading the Bleeders and Leakers program, and raised distributor and channel-partner margins from 53% to 61% by repricing parts sold through distribution, both of which meant partnering closely with Sales, Deal Desk and IT's business systems team the same way this seat does. I also built the Power BI system that validated 1,200 pricing opportunities against that target across three regions, so I know what it takes to keep a regression suite honest at scale.

I would bring someone who has already built and tested the CPQ and quote-to-cash workflow this role runs, not just used it after someone else configured it. Proof trail at adhi-pricing-ai.vercel.app/ref/fivetran.
