

PITCH DECK | FIVETRAN PRICING & ORDER OPERATIONS ANALYST

This role restores dedicated capacity for QTC testing and validation. I have already built that discipline from scratch, twice.

Pricing operations, order operations and quote-to-cash release validation from someone who has set up the CRM, CPQ and audit trail himself.

\$700K+ margin recovered in 2 quarters, Sensata Bleeders and Leakers program

53% to 61% distributor margin lift via repricing logic that stuck

1,200 pricing opportunities validated against a \$627M target, 3 regions

PriceKeel - founder, built the CRM, CPQ and quote-to-cash workflow end to end

Claude AI agents - automates recurring pricing analysis at Applied Materials

The posting is direct: dedicated capacity for pricing and order operations testing disappeared, and QTC changes started shipping unvalidated.

What losing that capacity runs into

A pricing or order change that skips UAT and regression testing does not fail loudly. It fails three weeks later as a broken booking, a signature packet that will not route, or a marketplace offer that quotes the wrong number.

Order Operations, IT's business systems team, Pricing Operations, Sales and Deal Desk all touch the same QTC path, so a gap in testing capacity becomes everyone's fire drill, not just one team's.

The fix is not more Salesforce CPQ configuration. It is someone who treats every release as a test case first and documents the system so the next change does not repeat the same fire drill.

What I have already run, at smaller scale

At **PriceKeel**, I built the company's own CRM, CPQ and quote-to-cash workflow from deal approval through order documentation, then set up the testing and audit trail Finance reviews before anything ships.

At **Sensata**, I built the Bleeders and Leakers Power BI system that validated 1,200 pricing opportunities against a \$627M target, the same discipline of checking a change against a hard number before trusting it.

Both mean I have sat on the same side of the table as Order Operations, Pricing Operations and Deal Desk, not just adjacent to it, coordinating a testable, documented change with all three at once.

A Pricing & Order Operations Analyst who validates QTC changes, executes UAT, and maintains the regression suite and system documentation, is describing this exact loop: test before it ships, document why, and keep it repeatable.

What the Pricing & Order Operations opening asks for, and where the proof sits.

What the role covers

- "Ensure system changes are tested, validated, and operationally ready before they go live... Pricing and Order Operations subject-matter expertise across signature packets, bookings, marketplace offers, and booking-to-order handoffs."*
- "...experience in pricing operations, order operations, business systems analysis, or quality assurance... ideally involving quote-to-cash processes."*
- "Working knowledge of Salesforce CPQ and order management or billing systems."*

My Proof

- QTC testing and validation:** built and now run PriceKeel's own testing and audit trail for every pricing and order change, the exact "validated and operationally ready" discipline this seat owns.
- CRM and CPQ ownership:** set up PriceKeel's CRM, CPQ and deal-approval workflow myself, so I know the system from configuration through the quote a customer signs.
- Order operations at scale:** validated 1,200 pricing opportunities against a \$627M target across 3 regions and 20 product lines on Sensata's Bleeders and Leakers system.
- Cross-functional handoffs:** the 53% to 61% distributor repricing needed sign-off from Finance on the model and Sales on what a partner would accept, the same multi-team handoff this role runs daily.

Bleeders and Leakers: **validate the number before anyone acts on it.**

Built as a BU-wide Power BI system covering 1,200 pricing opportunities against a \$627M target across 3 regions, 4 product families and 20 product lines, with pipeline funnel, win rate and stage distribution checked against source data before leadership ever saw a number.

\$433M

Margin Gaps Surfaced

Every gap traced back to a specific deal record, so leadership could act on it instead of debating whether the number was real.

\$700K+

Margin Recovered in 2 Quarters

Closed through documented, cross-functional negotiations, not a blanket price change nobody could explain later.

53% to 61%

Distributor Margin Lift

Repriced the channel logic itself and documented it, so the change held past the first quarter instead of drifting back.

At PriceKeel that same instinct became the product: a guardrail engine that checks a discount exception against a company's own closed-won and closed-lost history, plus an audit trail Finance can review before anything is approved. Same job, earlier in the pipeline.

What the first month on Fivetran's Order Operations & Monetization team looks like.

WEEK 1 Learn the regression suite Sit with Order Operations and IT's business systems team to walk the current regression test cases for recurring QTC changes, and shadow one signature-packet and one marketplace-offer release end to end. Why first: the same instinct that had me set up PriceKeel's own CRM and CPQ before automating anything on top of it.	WEEK 2-3 Own a validation cycle Take ownership of UAT for one live QTC change end to end: confirm pricing is operationally ready, execute the assigned test cases, and document the outcome so Pricing Operations and Deal Desk both trust it before launch. Why now: the same documented-before-trusted discipline that made the 53% to 61% distributor gain stick past the first quarter.	WEEK 4 Tighten the documentation Update pricing and order system documentation for the cases just run, and flag one gap in the regression suite worth closing before the next QTC release cycle. Why this fast: a regression suite only earns its keep if it grows every cycle instead of staying frozen at last year's edge cases.
--	---	---

CLOSE

You are hiring someone to keep QTC changes tested and operationally ready. I have already built that discipline from the ground up, twice.

The core proof is Sensata: **\$700K+ in margin recovered in 2 quarters**, distributor margins lifted **from 53% to 61%**, both validated against a Power BI system covering 1,200 pricing opportunities and a \$627M target, run cross-functionally with Sales, Finance and Deal Desk.

What is harder to find is someone who has also spent the last several months building the CRM, CPQ and quote-to-cash workflow a pricing-operations team like this one actually runs on. **I built that at PriceKeel**, so the testing-before-shipping instinct this role asks for is not something I would need to develop on the job.
