Hiring Team, GlobalFoundries

Standing up a new RF product line means demand forecasting, supply management and product pricing all have to work off the same view of the market from day one, before the usual playbook exists. That is the exact seat I sit in today: as Strategic Marketing III at Applied Materials, I size the semiconductor market with Sales, Engineering and Accounts, then build the value-based pricing and forecasting models that keep supply and demand in sync.

Revenue and PO management only work if the forecast underneath them holds up under a real target. At Sensata I recovered \$700K+ in margin in two quarters leading the Bleeders and Leakers program, and raised distributor and channel-partner margins from 53% to 61% by repricing parts sold through distribution, both while carrying P&L and revenue targets for a multi-\$100M industrial business.

I bring the launch side too. I owned end-to-end GTM for Sensata's new sensing products, driving \$2M+ in first-year revenue, and led a 5-consultant team sizing a semiconductor-adjacent market from 170 facilities to a SAM of 28 for Safran, the same TAM-to-launch arc a new RF product line runs on. At Applied Materials I automate recurring forecasting and pricing analysis with Claude AI agents, so the demand-planning cadence a new team like this one has to build stays lighter from the start.

What I would bring to GlobalFoundries is someone who already prices and forecasts inside a semiconductor product line today, not someone translating experience from an adjacent industry. Proof trail at [adhi-product.vercel.app/ref/globalfoundries](https://product.vercel.app/ref/globalfoundries).
