

PITCH DECK | GLOBALFOUNDRIES PRODUCT MARKETING MANAGER, RF

A new product line, on a new team, needs demand forecasting and pricing built together from day one. I run that exact loop today, in semiconductors.

Demand planning, product pricing and revenue management from someone who sizes the semiconductor market for a living.

Applied Materials, today - sizes and prices the semiconductor market with Sales and Engineering

\$700K+ margin recovered in 2 quarters, Sensata Bleeders and Leakers program

53% to 61% distributor margin lift via repricing logic that stuck

\$2M+ first-year revenue from a new sensing product GTM launch

170 to 28 facilities to SAM, Safran market-sizing engagement

A brand-new RF product line has no playbook yet. Demand, supply and pricing all have to be built at once, not in sequence.

What standing up a new product line runs into

Demand forecasting without a pricing view guesses at revenue. Pricing without a supply view promises what cannot ship. A new team building both separately loses the quarter reconciling them.

Design win and tape-out revenue timing only make sense against a market view that Sales, Engineering and Accounts all recognize as the same number.

The fix is not a bigger spreadsheet. It is someone who has already sized, priced and forecast inside a semiconductor product line, so the first quarter builds the system instead of surviving it.

What I already run, in semiconductors, today

At **Applied Materials**, I size the semiconductor market with Sales, Engineering and Accounts, then build value-based pricing and forecasting models across multiple product groups.

At **Sensata**, I led global pricing for a multi-\$100M Industrial BU, recovering \$700K+ in margin and raising distributor margins 53% to 61%, the same demand-meets-supply discipline a new RF line needs.

I also led the **Safran market-sizing engagement**, narrowing 170 facilities to a SAM of 28 across 3 product lines, the exact TAM-to-launch arc a brand-new product line runs at day one.

A Product Marketing Manager running demand forecasting, supply management, revenue and PO management, and product pricing for a new RF product line is describing this exact loop: one market view, priced and forecast together, from day one.

What the Product Marketing Manager opening asks for, and where the proof sits.

What the role covers

"Managing and executing the day-to-day business operations of the Product Line, including demand planning, supply management, quarterly revenue & PO management."

"Design win and tape-out revenue management, product pricing & support, performance reporting and analysis, process improvement."

Serves the Smart Mobile Devices, Wireless Infrastructure and Satcom markets; a new role on a new team.

My Proof

Demand planning and forecasting: builds forecasting models across multiple product groups at Applied Materials today, forecasting inflection points so supply keeps pace with demand.

Product pricing: recovered \$700K+ in margin and lifted distributor margins 53% to 61% at Sensata, then built value-based pricing for a fast-growing semiconductor market.

Revenue management: shaped multimillion-dollar customer quotes and AP26 revenue models directly alongside senior executives.

Building on a new team: owned end-to-end GTM for Sensata's new sensing products from zero, driving \$2M+ first-year revenue with no existing playbook to lean on.

Bleeders and Leakers: what pricing looks like when demand and supply are both real numbers.

Built as a BU-wide Power BI system covering 1,200 pricing opportunities against a \$627M target across 3 regions, 4 product families and 20 product lines, with pipeline funnel, win rate and stage distribution by salesperson and product line.

\$433M

Margin Gaps Surfaced

Ranked every pricing opportunity by competitive gap and customer willingness to pay so leadership could prioritize instead of guessing.

\$700K+

Margin Recovered in 2 Quarters

Closed through cross-functional negotiations grounded in a real forecast, not a blanket price change.

53% to 61%

Distributor Margin Lift

Repriced the channel logic itself, so the gain held past the first quarter instead of drifting back.

At Applied Materials that same instinct runs earlier in the pipeline: sizing the semiconductor market with Sales, Engineering and Accounts before a pricing or forecasting model is even drafted, so the number everyone works from is the same one.

What the first month on GlobalFoundries' new RF product line looks like.

WEEK 1

Build the shared market view

Sit with Sales, Engineering and the RF product team to build one demand-planning view across Smart Mobile Devices, Wireless Infrastructure and Satcom, the same cross-functional sizing exercise run at Applied Materials.

Why first: a demand forecast nobody agrees on is worse than no forecast at all.

WEEK 2-3

Draft the pricing and supply model

Build a value-based pricing model against that shared demand view, then pressure-test it against known supply constraints and design-win timelines before it goes to leadership.

Why now: the same forecast-then-price sequence that made the 53% to 61% distributor gain stick.

WEEK 4

Ship the reporting cadence

Stand up the performance reporting and PO-management dashboard the product line will run on, so week 5 starts from a repeatable process instead of another ad hoc pull.

Why this fast: a new team's first system either becomes the standard or gets rebuilt in six months. Better to build it once.

CLOSE

You are standing up demand planning, supply and pricing together for a new product line. I run that exact loop in semiconductors today.

The core proof is Applied Materials and Sensata together: **sizes and prices the semiconductor market** today, and previously **recovered \$700K+ in margin** while lifting distributor margins **from 53% to 61%** on a multi-\$100M industrial business, both run cross-functionally with Sales, Engineering and Finance.

What is harder to find is someone who has also launched a product line from zero: I owned GTM for Sensata's new sensing products end to end, driving **\$2M+ in first-year revenue** with no existing playbook. That is the same starting line this RF product line is on.
