Hiring Team, Ashby

I wrote the PRD, scoped the MVP and owned the onboarding flow for a product with no prior users, from signup to first match, and got it to 50+ early users on my own. That is the exact shape of what you are hiring for: a single owner for the customer journey, not a slice of it handed off between teams.

The posting is clear that this is not an A/B-testing seat, it is a research-and-thinking seat. That matches how I actually work. At Sensata I ran 30+ structured interviews with OEMs and distributors before I trusted a roadmap call, and the fix that came out of those conversations, not a test variant, lifted CSAT 22%. On SwipeHire, 12+ user interviews told me exactly where job seekers stalled in onboarding before I touched the flow itself.

Adoption metrics are the other half of this role, and I have built that muscle without a dedicated data team either. At Sensata I turned SQL and GA4 data from 50K+ connected devices into the KPI framework that found which usage signals actually predicted adoption, not just activity. I know what it is to define a metric from scratch and then defend it in a room with Engineering and Sales, which is the same room a Product Qualified Lead definition has to survive before RevOps will route against it.

The customer success side of this role is not new territory either. I ran an 8-person Customer Success team at Pixis across 8 accounts and cut churn 50% through account strategy built on actual usage, not renewal dates, the same proactive relationship this role asks for with Ashby's Customer Success team. And at Sensata, giving engineers a problem and the room to own the solution instead of a 40-page spec is how a 100+ feature backlog shipped 25% faster.

I would like to own Ashby's onboarding and growth motion the same way. Proof trail at adhi-product-ai.vercel.app/ref/ashby.
