Hiring Team, Emergent

The Bleeders and Leakers program I ran at Sensata started the way most Founder's Office mandates do: a vague instruction that margin was leaking somewhere across a \$627M business, with no dashboard, no owner list and no cadence behind it. I built the system that turned 1,200 scattered pricing opportunities into a \$433M shortlist prioritized by salesperson and product line, then negotiated \$700K plus of it back into margin in two quarters. That is the exact move your posting describes: take a loosely defined priority from problem definition to owners, decisions, cadence and a measurable outcome, as a generalist rather than a specialist waiting to be told which lane to stay in.

What Emergent is building, AI agents that write, maintain and test code well enough to turn months-long development cycles into days, is the kind of category-defining product thesis that makes the Founder's Office job harder and more interesting: the org changes shape every quarter, and the person running it has to keep up without a playbook. I am already running my own version of that problem. I founded PriceKeel, a decision-integrity layer for B2B SaaS deal pricing, and built the guardrail engine and audit trail myself from a blank page, the same zero-to-one product instinct this seat is asking for. At Applied Materials today I turn ambiguous input from Sales, Engineering and Accounts into one shared market view, and I automate the repetitive side of that synthesis with AI agents built on Claude, so the operating cadence keeps running without me re-doing the same analysis every week.

Every role on my resume has required the same range your posting asks for: build the leadership decks and OKR cadence that keep a business aligned, then sit with the people actually doing the work when the plan stops matching reality. I have done that across a multi-\$100M industrial business at Sensata, an 8-person client team at Pixis, and a product I shipped zero-to-one at SwipeHire, an AI platform of my own. Running the Founder's Office at a company scaling this fast is the next version of that same range, and it is the kind of seat I have been building toward with every one of those stops.

What I would bring on day one is a habit of turning ambiguity into a number and then building the mechanism that keeps producing it, plus the presentation and communication instincts that come from running leadership reviews at every job I have had. Proof trail at adhithyabhaskar.vercel.app/ref/emergent.
