Hiring Team, B-Stock

Your posting draws a specific line: Lifecycle Marketing owns the funnel, this role owns whether buyers actually find and use what Product ships. At Sensata I built the KPI frameworks in SQL and GA4 that answered that exact question for a new sensing product across 50K+ connected devices, defining what counted as adopted before launch and isolating the cohorts that lifted feature adoption 18%, not after the fact.

The AI-assisted half of the role is already how I work day to day. As Strategic Marketing III at Applied Materials, I run AI agents built on Claude that turn forecasting and market-sizing questions into decision-ready output faster than a manual pull, the same repeatable hypothesis-to-insight workflow you want applied to feature adoption and post-launch reporting. I also partner daily there with Sales, Engineering and Accounts, which is the same cross-functional trust your sprint reviews and product forums are built on.

Buyer personas built on behavior rather than demographics are also familiar ground. I ran 30+ customer interviews with OEMs and distributors at Sensata to find real pain points, then briefed 50+ sales reps on the resulting launch messaging and targeting rationale, which is the same handoff this role would run with your Lifecycle team. On the measurement side, I built the Sensata pricing dashboards and competitive benchmarking that let me make evidence-based calls across 1,200+ opportunities without waiting on someone else to run the numbers.

A high-volume, data-driven marketplace like B-Stock's is exactly the kind of business I want to keep building adoption analytics for. I would welcome 15 minutes to walk through how I would structure adoption metrics for a launch like saved search or delivery preferences. Proof trail at adhi-product-ai.vercel.app/ref/b-stock.
