Hiring Team, Amazon Web Services (AWS)

At Sensata I built the FY2026 Bleeders and Leakers Power BI dashboard: 1,200 pricing opportunities tracked against a $627M target by win rate, average dollar per win and pipeline stage, split by region, product line and salesperson. That dashboard surfaced $433M in margin gaps for leadership to act on. Sizing a market, segmenting it and turning the output into a prioritized call for executives is the same motion your Startups GTM Ops team runs, just pointed at total addressable market instead of a pricing book.

The total addressable market and segmentation work in your posting is also what I run today at Applied Materials. I size the semiconductor market with Sales, Engineering and Accounts, turning field and technical input into one market view, then build the sizing and forecasting models that follow it across product groups. In grad school I led a 5-consultant team that scoped a client's TAM/SAM/SOM from 170 facilities down to a SAM of 28, benchmarked 10+ competitors and presented market-entry recommendations directly to the client's leadership, the same executive-facing scenario work this role asks for.

Competitive dynamics and resource deployment show up in my pricing work too. At Sensata I benchmarked 10+ competitors into a market view that drove +8% market share, then modeled site transition strategy and AP26 revenue scenarios with senior executives, presenting recommendations instead of just the data behind them. I also automate the repetitive parts of that research with AI agents built on Claude, which I understand is the daily habit this team expects from the seat.

Proof trail at adhithyabhaskar.vercel.app/ref/aws. Happy to walk through the Safran and Sensata models in more detail whenever it is useful.
