Hiring Team, Mintive

Your posting says you would rather the machine act than report, and that is the exact build I keep signing up for. As founder of PriceKeel I stood up our CRM, CPQ configuration, forecast and pipeline review cadence, and deal approval workflow from zero, with no system to inherit, built so Finance can audit every pricing decision instead of taking it on faith.

Before PriceKeel I ran the closest thing Sensata had to a single source of truth: the FY2026 Bleeders and Leakers Power BI build, 1,200 opportunities tracked against a $627M target across 3 regions, 4 product families and 20 product lines, with win rate and stage distribution broken out by salesperson. I recovered $700K+ in margin in two quarters by settling pricing disputes from the data instead of precedent, and raised distributor and channel-partner margins from 53% to 61% by making the same kind of channel-attribution call your partner and co-sell reporting will need settled and kept settled.

I am already agent-native day to day: at Applied Materials I automate repetitive revenue analysis with AI agents built on Claude, and before that I shipped an AI job-matching platform end to end on the OpenAI API, so building agents that do the work rather than describe it is not a new habit for me. My honest read on a founding build like this one: the data foundation only earns trust once two teams can stop disagreeing about a number, so I would map the workflows and rank them by hours burned before I shipped a single automation, not after.
