Hiring Team, SoFi

Two quarters into the Bleeders and Leakers program at Sensata, I had recovered \$700K in margin by building a Power BI dashboard that ranked 1,200 pricing opportunities against a \$627M target across 3 regions, flagged \$433M in margin gaps, and gave Finance an audit trail for every repriced deal. That is close to the shape of your Pricing Implementation Analyst opening: translating a pricing strategy into tactical specs, keeping the audit trail and governance clean, and building the controls that catch a bad exception before it reaches a member's rate.

The margin recovery only held because the logic behind it survived contact with Finance, Sales and the data. I raised distributor and channel-partner margins from 53% to 61% by rebuilding how parts sold through distribution were priced, then validated that the new pricing logic held past the first repricing pass rather than drifting back within a quarter. That validation habit, checking that an implementation actually matches the strategy once it is live, is the same discipline your Controls and Process Improvement work asks for, whether the anomaly shows up in a Tableau dashboard or a Power BI one.

At Applied Materials now, I partner with Sales, Engineering and Accounts to turn field and technical input into one pricing view for a fast-moving semiconductor equipment market, and I automate the recurring parts of that analysis with AI agents built on Claude so fewer hours go to the same pivot table every cycle. I bring SQL and Python to that work daily, and I have shipped production dashboards in both Power BI and Tableau, which maps directly onto the toolset your team runs pricing execution on.

What I bring beyond the resume: I am currently building PriceKeel, a decision-integrity layer for B2B SaaS deal pricing that keeps an auditable record of every discount call for Finance, essentially the governance problem your Pricing Execution work solves for consumer lending, built from the other side. I would like to bring that same instinct, ship a pricing control that Finance can audit and Engineering can maintain, to SoFi's lending pricing team. Proof trail at adhi-pricing-ai.vercel.app/ref/sofi.
