Hiring Team, Google

Your posting names something most product postings only gesture at: "experience integrating generative AI tools or LLM interfaces into workflows." I run that integration today, not as a side project. As Strategic Marketing III at Applied Materials, I built AI agents on Claude that automate my own recurring measurement and forecasting analysis, the same pattern of pulling an LLM into a repeatable workflow that a Gemini-integrated ads measurement product needs.

The measurement half of this role is also familiar ground. At Sensata I built KPI frameworks in SQL and GA4 on top of 50K+ connected industrial devices, isolating the cohorts and adoption signals that lifted feature adoption 18%. I ran the same attribution thinking at Pixis and Plug Power, where retail-media spend on Amazon Ads and Criteo and paid search across Google Ads and Microsoft Ads had to tie back to a real ROAS number every month, not a vanity click count.

Taking a product from conception to launch is not theoretical either. I owned GTM for Sensata's new sensing products from positioning through channel and launch, driving $2M+ in first-year revenue, and I built SwipeHire, an AI job-matching platform, from a blank page to 50+ early users, writing the PRD and scoping the MVP myself.

The role also asks for the cross-functional pull between engineering, UX and sales, and the discipline of presenting to leadership. I partner with Sales, Engineering and Accounts on every forecasting model I build at Applied Materials today, and I presented pricing and revenue models directly to senior executives at Sensata. I would welcome the chance to bring that same measurement-to-roadmap pattern to the media effectiveness team. Proof trail at adhi-product-ai.vercel.app/ref/google.
