PITCH DECK | GOOGLE PRODUCT MANAGER, MEDIA EFFECTIVENESS

Scaling Marketing Mix Model measurement with Gemini means turning "integrate generative AI into the workflow" from a posting line into a system that runs every week. I already run that system, on Claude, today.

A GA4 and SQL measurement framework across 50K+ connected devices, paired with a working GenAI-automated workflow and two 0-to-1 product launches.

- **GenAI workflow, running today**: AI agents on Claude automate my own measurement analysis
- **+18% adoption** from a GA4 and SQL KPI framework on 50K+ connected devices
- **$2M+ revenue** from a 0-to-1 product GTM launch
- **50+ users** on an AI product I built zero to one, myself
- **Cross-functional by design**: Sales, Engineering and Accounts on every model

WHY THIS DECK EXISTS

The posting does not ask for someone who has heard of GenAI. It asks for someone already running it inside a repeatable workflow, and fluent in ads measurement.

What the role actually requires

A GenAI tool or LLM interface already integrated into a real, recurring workflow, not a one-off pilot.

A product background in data, analytics or ads-measurement software, not just marketing.

At least one 0-to-1 launch, taken from conception through to shipped.

What I have already run

At **Applied Materials**, I built AI agents on Claude that automate my own recurring measurement and forecasting work, no pilot phase, running every week.

At **Sensata**, I built KPI frameworks in SQL and GA4 across 50K+ connected devices, the same measurement layer this team runs at Google Ads scale.

I took Sensata's new sensing products from conception to launch, and built SwipeHire zero to one on my own, end to end.

> **The through-line: every one of these started as "figure out how to measure this, then automate the part that repeats," the same mandate behind media effectiveness.**

THE MANDATE, MAPPED

What the posting asks for, and where the proof already sits.

What the role covers

> *"Experience integrating generative AI tools or LLM interfaces into workflows."*

> *Looking for product management background in data, analytics or ads-measurement software.*

> *Looking for someone who has taken a technical product from conception to launch (0 to 1).*

My proof

GenAI integration, not a pilot: AI agents built on Claude automate my recurring measurement and forecasting analysis at Applied Materials today.

Data and ads measurement: KPI frameworks in SQL and GA4 on 50K+ connected devices at Sensata; Amplitude and Tableau analysis across 30+ campaigns lifted ROAS 40% at Pixis.

Conception to launch, twice: owned GTM for Sensata's new sensing products to $2M+ first-year revenue, and shipped SwipeHire zero to one to 50+ users.

THE PROOF, IN DEPTH

Measure it, automate it with GenAI, then ship it 0 to 1.

The same three-step pattern, run at Sensata, Applied Materials and on my own product: find the metric, automate the part of the analysis that repeats, then ship the resulting feature or launch.

+18% Adoption

GA4 and SQL KPI Framework

Built on 50K+ connected industrial devices at Sensata, isolating the cohorts and adoption signals that moved the number.

GenAI, Running Today

Claude Agents in Production

Automate recurring measurement and forecasting analysis at Applied Materials, not a proof-of-concept.

$2M+ Revenue

0-to-1 GTM Launch

Sensata's new sensing products, taken from conception through positioning, pricing, channel and launch.

None of these were a one-time analysis. Each one became a framework or a workflow that kept running after the first result.

FIRST 30 DAYS

What the first month on the media effectiveness team looks like.

WEEK 1

Map the measurement stack

Review the existing MMM inputs and outputs, and find where generative AI already touches the workflow versus where the step is still manual.

Why first: the same first move behind the Sensata GA4 KPI framework build.

WEEK 2-3

Automate one recurring analysis step

Pick the highest-friction manual step in the measurement cycle and build the GenAI-assisted workflow around it with Engineering and Research.

Why now: the exact Claude-agent workflow I already run at Applied Materials.

WEEK 4

Ship the first packaged recommendation

Take the resulting insight through positioning, packaging and promotion to the Ads leadership review, the execution cycle this role names.

Why this fast: the same analyze-position-package-promote cycle from the Sensata GTM launch.

CLOSE

You are hiring someone who already runs the GenAI-into-workflow pattern this role names, and already speaks fluent ads measurement. I would like to bring both to media effectiveness.

The GenAI half: **AI agents built on Claude** automating recurring measurement and forecasting analysis at Applied Materials today, not a pilot, plus a GA4 and SQL KPI framework across 50K+ connected devices at Sensata that lifted adoption 18%.

The product half: a **0-to-1 GTM launch** that drove $2M+ in first-year revenue at Sensata, a self-built AI product shipped zero to one to 50+ users, and the cross-functional habit of partnering with Sales, Engineering and Accounts on every model.
